

## Linear Actuators

Linear actuators for industrial, mobile, medical, office and domestic applications.

**THOMSON**<sup>®</sup>

*Linear Motion. Optimized.*

*Linear Motion. Optimized.*

## Thomson – the Choice for Optimized Motion Solutions

Often the ideal design solution is not about finding the fastest, sturdiest, most accurate or even the least expensive option. Rather, the ideal solution is the optimal balance of performance, life and cost.

### The Best Positioned Supplier of Mechanical Motion Technology

Thomson has several advantages that makes us the supplier of choice for motion control technology.

- Thomson own the broadest standard product offering of mechanical motion technologies in the industry.
- Modified versions of standard product or white sheet design solutions are routine for us.
- Choose Thomson and gain access to over 70 years of global application experience in industries including packaging, factory automation, material handling, medical, clean energy, printing, automotive, machine tool, aerospace and defense.
- As part of Fortive Corporation, we are financially strong and unique in our ability to bring together control, drive, motor, power transmission and precision linear motion technologies.

### A Name You Can Trust

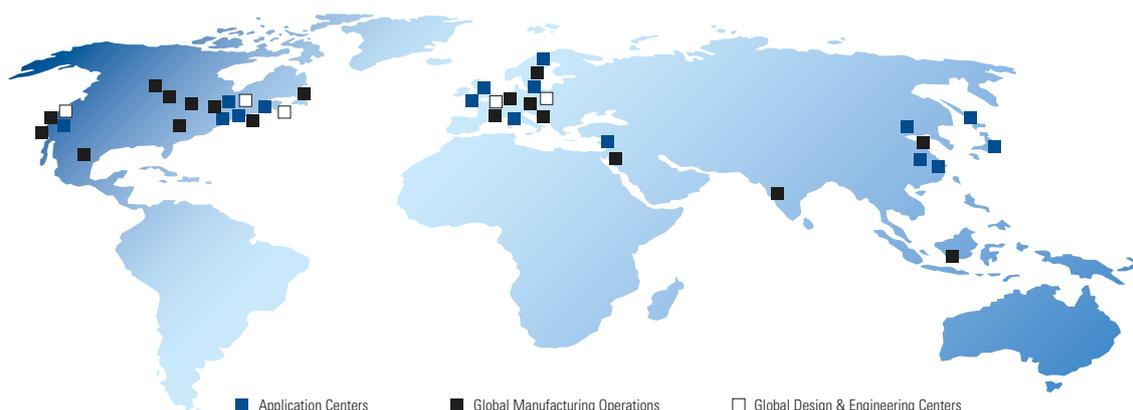

A wealth of product and application information as well as 3D models, software tools, our distributor locator and global contact information is available at [www.thomsonlinear.com](http://www.thomsonlinear.com). For assistance in Europe, contact us at +44 1271 334 500 or e-mail us at [sales.uk@thomsonlinear.com](mailto:sales.uk@thomsonlinear.com).

Talk to us early in the design process to see how Thomson can help identify the optimal balance of performance, life and cost for your next application. And, call us or any of our 2000+ distribution partners around the world for fast delivery of replacement parts.

### The Fortive Business System

The Fortive Business System (FBS) was established to increase the value we bring to customers. It is a mature and successful set of tools we use daily to continually improve manufacturing operations and product development processes. FBS is based on the principles of Kaizen which continuously and aggressively eliminate waste in every aspect of our business. FBS focuses the entire organization on achieving breakthrough results that create competitive advantages in quality, delivery and performance – advantages that are passed on to you. Through these advantages Thomson is able to provide you faster times to market as well as unsurpassed product selection, service, reliability and productivity.

### Local Support Around the Globe

# Introduction

## Company Introduction

The history of the Thomson Electrak® actuator goes back to the development of ball screw actuators 40 years ago in Marengo, IL, USA. The first generation of general purpose actuators were developed for control of accessory drives on garden tractors and farm equipment. Since that simple beginning, actuators are now used in all types of equipment to automate a process, remove people from dangerous situations, provide remote control or make difficult, tedious manual jobs easier.

The linear actuators in this catalog represent proven design concepts found in the entire Electrak series. From light load 050s to the high performance Electrak 10 series capable of handling loads up to 6800 N, Thomson offers features unavailable anywhere else.

### The world's most versatile actuator selection

Thomson combined the clevis to clevis mount Electrak series, and the trunnion mount Electrak PPA units, to provide the most versatile selection of linear actuators available. Our actuator team has solved over 10000 tough application challenges with even tougher actuators. We

built our reputation in the mobile off highway market in extremely demanding operating conditions. And if you can't find the actuator to meet your application, call us for a cost effective actuator built to your needs. Thomson builds more custom actuators than anyone.

### You can count on Thomson

Thomson linear actuators – rugged, reliable remote linear motion control with the push of a button. You can count on Thomson for worldwide sales, service, application support and local availability. Please visit [www.thomsonlinear.com](http://www.thomsonlinear.com) for more information.

1967	1969	1974	1982	1984	1987	1988	1991
The first generation of actuators for use in garden tractors and farm equipment is released.	First line of ball screw driven actuators with right angle AC and DC motors is released.	First line of actuators with parallel motors and both acme and ball screw drive is released.	The "Tiger" line actuators are released for OEMs.	Electrak 1, 2, 5, 10 and 100 are released for distribution.	Electrak 205 and the first line of MCS controls are released.	Electrak 1SP with feedback potentiometer is released.	The first lifting columns, DMD and DMA, are released.
							

# Introduction

## Product Introduction

Thomson actuators are easy to mount and operate, require no maintenance, don't leak hydraulic fluid, are easy to incorporate into an automated process and once installed they will work reliably under the toughest conditions year after year.

Actuators offer advantages over mechanical and hydraulic systems in many applications. They are self-contained, rugged, and durable, making them ideal anywhere you want to lift, lower, push, pull, rotate or position a load.

### Compact design

With their compact size, actuators can be located in confined areas. An actuator with a 100 mm stroke length can produce 6800 N of force from a 290 mm package. Electrak 1 and 050 series actuators fit small areas with package lengths as short as 115 mm.

### Rugged and reliable

All Thomson actuators incorporate strong, high quality components to assure trouble-free service. Rugged spur, worm or helical gearing, aircraft quality lubricants and high performance motors provide the maximum life and value. The actuators are gasketed and sealed throughout for protection in wet, dirty and oily environments and are ideal for use on outdoor equipment. The rod style actuators have stainless steel or aluminum extension tubes to resist corrosion.

### Maintenance-free

All adjustments and lubrication are made at the factory and no maintenance is required or recommended. Consistent,

repeatable performance is provided for the entire lifetime of the actuator.

### Bidirectional

Thomson actuators can push and pull loads ranging from one to 680 kg, and can extend up to 900 mm. With the Thomson series of actuator controls, you can create an actuator control system to meet your particular motion control requirements.

### Safe operation

Motors used on Electrak actuators utilize thermal switches in their windings or Electronic Load Monitoring to shut the actuator off in case of overheating. A standard overload clutch or Electronic Load Monitoring will stop the motion if the load is too great or at the end of a stroke. All linear actuators will hold their loads with power removed.

### Versatile

Stroke lengths of 25 to 1500 mms are available and speeds are as high as 110 mm per second. Actuators are easy to apply, quick to install and usually only requiring two wires for operation. A wide variety of options and controls makes it easy to find the perfect actuator for your application. And if you have special needs, cost effective custom solutions are our speciality.

1992	1994	1998	1999	2000	2006	2013	2014
A patent for a load lock device is granted.	Electrak 1LL is released.	Electrak 150 with two patents is released. AC control line is released.	Electrak 050 with patented design and the first rotary actuators are released.	The first LM80 rodless actuator is released.	The DCG control line is released.	Max Jac and Electrak Throttle are released.	The lifting columns range LC Series is released.
							

# Introduction

## The Benefits of Electrification

Electrification is converting manual, hydraulic and pneumatic operations to electromechanical motion. Substantially improved machine performance and cost advantages can be gained through electrification.

### Reduce costs

- Electric actuation components cost less than comparable hydraulic and pneumatic systems.
- One electric linear actuator is faster and easier to install than the multiple hydraulic and pneumatic components required to achieve the same function.
- Electric actuators feature quick and predictable system tuning when compared to the headaches of configuring hydraulic systems and their components which contend with power variation, temperature variation, and non-linear performance profiles.
- Compare zero maintenance electric actuators against the fluid replacement, leak repairs and other routine maintenance needed to support hydraulic systems.
- Eliminate the environmental problems and costs associated with hydraulic fluid leaks and fluid disposal.

### Boost productivity and efficiency

- Improve control over critical machine operations with:
  - Multiple digital and analog feedback options
  - Fixed and programmable limit switches for “teach and repeat” positions
  - Low voltage switching options that can interface directly with programmable PC/PLC controllers
  - Pulse width modulation for variable speed control
- Superior accuracy and repeatability
- Link and automate simultaneous processes
- Reduce down time with:
  - Zero maintenance
  - Longer component life
  - Redundancy through manual override
- Improve safety and reduce costs by removing people from danger with convenient remote control

### Great opportunities for electric conversion

#### Making jobs easier

- Raising and lowering a deck on a mower, paver or floor scrubber.
- Shifting manual transmission.
- Lifting wheelchairs into a vehicle.
- Opening and closing doors on buses or vans.

#### Automating a process

- Moving twine across a round bale of hay for consistent wrap.
- Varying the chute opening on a salt/sand spreader based on speed for consistent application.
- Lift and lower pantographs on electrical trains and trams.

#### Providing remote control

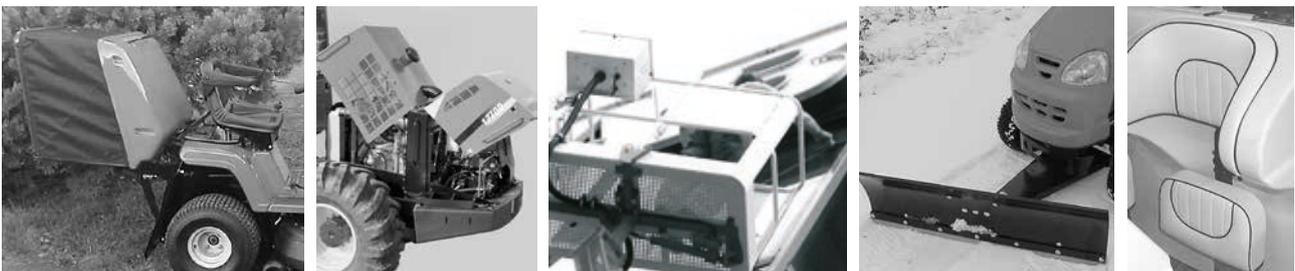

- Throttle control from the rear of garbage trucks.
- Positioning the discharge spout on a large chipper, snowblower or combine.
- Opening a chute on a salt/sand spreader.
- Positioning of solar energy panels and wind power plant turbines.
- Opening/closing the engine hatch on boats.
- Positioning boat, handicap vehicle seats.
- Belt tensioning.

#### Removing people from danger

- Sliding a cover over the stairs in a recreational vehicle.
- Throttle control for a tree stump grinder to keep the operator away from moving parts or flying debris.
- Medical waste/refuse compacting.

#### Replacing hydraulics or pneumatics

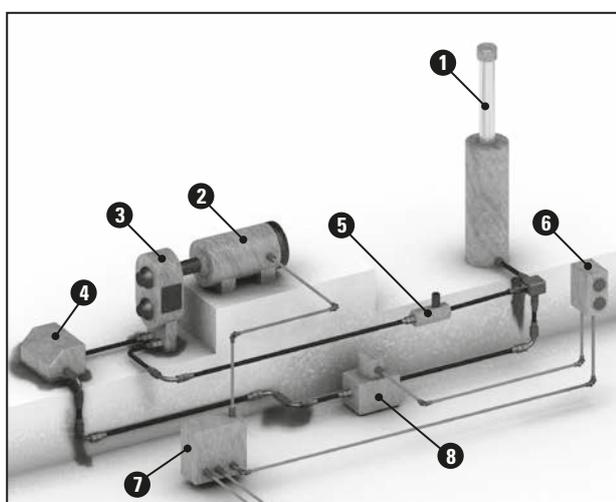

- Power steering.
- Dump beds on ATVs.
- Positioning mower decks on golf course equipment.

## Introduction

### The Benefits of Electrification

Replacing hydraulic or pneumatic cylinders with electrical linear actuators means a simpler and smaller installation, easier control, lower energy costs, higher accuracy, less maintenance, less noise and a cleaner, healthier environment.

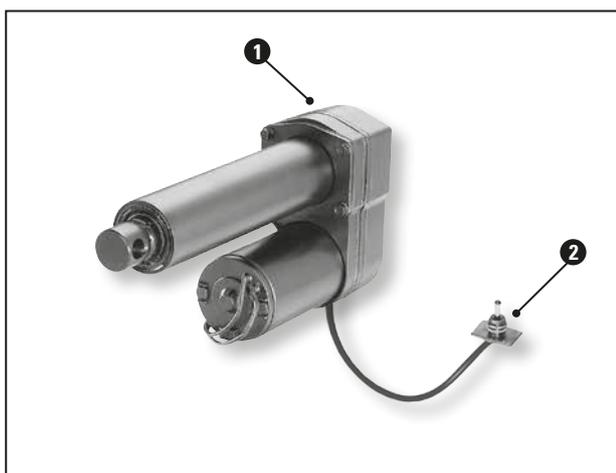

You can design, purchase and install all these components or you can select and install an actuator and control.

#### Single acting, uni-directional hydraulic cylinder system

1. Hydraulic cylinder
2. Electric pump motor
3. Hydraulic pump
4. Hydraulic oil reservoir
5. Check valve
6. Operator push button box
7. Relay cabinet
8. Unloading valve

This single acting, uni-directional hydraulic cylinder system is one of the simplest hydraulic solutions. This system only allows consistent performance in one direction. In order to get consistent performance in both directions a bi-directional system would be required which is even more complex and costly.

Plug and play type of connections, simple installation and no need for any set up or adjustments ensures accurate, clean and trouble free operation within the hour.

#### Electric linear actuator system

1. Linear actuator
2. DPDT switch

This simple electrical actuator system will ensure consistent operation in both directions. It will also give you added features such as electronic load monitoring, end of stroke limit switches, mid stroke protection and manual override operation in case of power failure. Optional features such as analog or digital position feedback, adjustable end of stroke limit switches, end of stroke indication outputs and signal following capability are also available. Another advantage is that a system like this is easy to integrate with other control systems normally found in industrial systems or vehicles such as PLC's, micro-controllers, computers or simple relay based systems.

# Introduction

## Actuator Applications

Thomson Electrak actuators can be found in the most diverse applications, ranging from agricultural to industrial, ventilation and medical equipment. Anywhere you want to lift, lower, push, pull, rotate or position a load - only your imagination will set the limit.

### Mobile-off-highway

Actuators are widely used in agricultural, construction, mining, forestry, road work and railway equipment for the control of seats, hoods, doors, covers, balers, pantographs, sprayer booms, throttles and much more.

### Turf and garden

Actuators can be found on riding lawn mowers, golf carts, garden tractors, cleaning machines, sky lifts and other utility vehicles.

### Industrial equipment

Actuators are used on conveyor belts, for adjustable work tables/platforms and in the opening and closing of hatches, doors and locks. They are also common in machines for dispensing, cutting, packaging, labeling, scanning or printing.

### Health and fitness

Actuators are commonly used in patient lifts/beds, handicap adapted vehicles and wheel chairs to position patients or equipment. Other applications include hospital devices, examination chairs/tables and work out/gym apparatus.

### Office, domestic and entertainment equipment

At home, in the office and in the entertainment business actuators are used in automatic doors, lifts, garage doors, gates, satellite dishes, beds, reclining chairs, adjustable office desks, arcade games, vending machines, theatre/TV/ movie props and theme park attractions.

### Marine

On boats, ships and oil rigs actuators are used in seats, hatches, fire doors, rescue equipment, valves and throttles.

### Ventilation and process control

Actuators are used for valve control in ventilation and process equipment.

# Introduction

## Selection Procedure

Thomson actuators have been divided into good, better and best groups to help you select the appropriate actuator for your application. By using the simple selection procedure described below and the Performance Overview on the next few pages, the process will be even easier.

### Good

These actuators are the lowest cost solution, provide capable, reliable performance and have some flexibility of options and configurations. If you just need a basic actuator, this is the best choice.

### Better

These actuators have more flexibility in options, configurations and modifications. They have passed the test of time in the toughest agriculture and construction applications. Choose from this group if you need a rugged, heavy duty actuator customized to your application.

### Best

These robust and strong actuators are the market leaders with state of the art technology and flexibility. They are smaller, lighter and have a shorter retracted length than other actuators on the market. If you need electronic load monitoring, programmable limit switches, digital feedback or signal following, this is the group for you.

### Selection procedure

#### Step 1 - Determine Voltage

DC actuators can be operated by battery, a rectifier or an actuator control with 230 Vac input. AC actuators are either 230 or 400 Vac.

#### Step 2 - Determine Load/Speed

Select the actuator which has the load and speed rating that suits your application.

#### Step 3 - Select Stroke Length

Choose the desired stroke length from either the Performance Overview pages or the individual product pages.

#### Step 4 - Verify Design Considerations

Do you need a very short retracted length, adjustable, fixed or programmable limit switches, electronic load monitoring, digital or analog feedback, low voltage power switching, manual override, signal following, clevis mounting, tube mounting or trunnion mounting? If you need an actuator to take side loads or cantilever loads, select from the LC-Series, DMD, DMA or LM80 actuators.

#### Step 5 - Select Control

The controls in the catalog are designed for use with Elektrak actuators and range from a simple switch to a control with membrane switches and feedback display or with a hand pendant.

### On-line selection software

On [www.thomsonlinear.com](http://www.thomsonlinear.com) you can select an actuator by using the actuator product advisor. This easy to use software lets you play with all the parameters and will give you all the relevant data and the correct ordering information for your choice.

### About Legacy Actuators

The legacy products will not be further described in this catalog. We recommend you choose one of the products on the preceding pages, especially when designing new equipment. However, the legacy actuators can still be purchased and we fully support them. Please contact customer support if you need more information.

[www.thomsonlinear.com](http://www.thomsonlinear.com)

### About Custom Actuators

The actuators you see on these pages are some of the building blocks we use to create cost effective custom actuators for OEMs. If you can't find the actuator that meets your needs, call customer service for a custom solution. Thomson is the industry leader in custom actuator design.

# Electrak® 1

12, 24 and 36 Vdc - load up to 340 N

## Standard Features and Benefits

- Very compact and lightweight
- Integrated end of stroke limit switches
- Corrosion resistant housing
- Self-locking acme screw drive system
- Maintenance free
- Ideal for replacement of comparable size pneumatic and hydraulic cylinders

## General Specifications

Parameter	Electrak 1
Screw type	acme
Internally restrained	no
Manual override	no
Dynamic braking	no
Holding brake	no, self-locking
End of stroke protection	end of stroke limit switches
Mid stroke protection	no
Motor protection	auto reset thermal switch
Motor connection	flying leads and connector
Motor connector	Packard Electric Pack-Con male 8911773 with terminal 6294511. Mating connector: 8911772 with terminal 8911639 (p/n 9300-448-001)
Certificates	CE
Options	none

S: stroke  
 A: retracted length  
 A1: installation must include at least this much coast beyond limit switch shut off  
 A2: red lead  
 A3: yellow lead

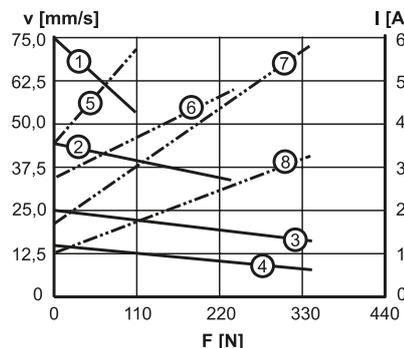

Ordering stroke	[inch]	1	2	3	4	5	6
Electrical stroke (S) *	[mm (inch)]	20,8 (0,82)	46,2 (1,82)	71,6 (2,82)	97,0 (3,82)	122,4 (4,82)	147,8 (5,82)
Retracted length (A)	[mm]	134,5	159,9	185,3	210,7	236,1	261,5
Weight	[kg]	0,52	0,54	0,60	0,63	0,66	0,68

\* The electrical stroke is the stroke when the internal limit switches switch off the power to the motor. The installation then must allow the extension tube to coast at least 0,7 mm beyond that position before it becomes mechanically blocked to travel any further (distance A1). If there is no mechanical block the extension tube coasting distance will depend on the load, no load means the longest coasting distance while the distance becomes shorter as the load becomes higher. The exact coasting distance depends on the load, in which direction the load acts (push or pull), the mounting orientation of the actuator and any added friction to the system by guides or other installations and has to be determined on a case by case basis.

» Electric Wiring Diagram - see page 56

## Standard Features and Benefits

- Designed for office or medical applications
- Small, quiet and lightweight
- Very short retracted length
- Low cost
- Durable and corrosion free plastic housing
- Color molded into the plastic, no painting required
- End of stroke limit switches with dynamic braking
- Maintenance free
- Internally restrained extension tube
- Estimated life is minimum 40000 cycles
- Q-version for noise sensitive applications

### Speed and Current vs. Load

# Lifting Column LC1600

24 Vdc - load up to 1600 N

Stroke, retracted length and weight relationship						
Ordering stroke (S)	[mm]	200	250	300	350	400
Minimum retracted length (L min)	[mm]	380	430	480	581	631
Weight of unit	[kg]	9.1	9.8	10.5	11.8	12.4

The desired ordering stroke (S) will determine the minimum retracted length (L min) and the weight of the unit. The table provides the corresponding minimum retracted length (L min) and weight values to each of the available standard stroke lengths (S).

# Lifting Column LC2000

24 Vdc - load up to 2000 N

» Ordering Key - see page 81

» Glossary - see page 85

» Electric Wiring Diagram - see page 57

## Standard Features and Benefits

- For medical and ergonomic automation applications
- Self supporting column in extruded anodized aluminum
- Low weight and quiet operation
- Smooth operating telescopic lead screw drive
- High load torque capability
- Very short retracted length
- High extension to retraction ratio
- Maintenance free
- Load holding brake
- Integrated end of stroke limit switches
- EMC recognized for medical applications

Dynamic braking	no <sup>(1)</sup>
Holding brake	yes
End of stroke protection	end of stroke limit switches
Mid stroke protection	no <sup>(1)</sup>
Motor protection	no <sup>(1)</sup>
Motor connection	cable
Motor connector	Molex 8 pin plug
Certificates	CE EMC for medical applications <sup>(2)</sup>
Options	encoder position feedback

(1) Dynamic braking, mid-stroke protection, and motor protection are provided when used with DCG control.

(2) Emission: EN 61000-6-3:2001, EN 60601-1-2:1993, EN 55011 Class B  
Immunity: EN 61000-6-2:2001, EN 61000-4-2, EN 61000-4-3

## Performance Specifications

Parameter		LC2000
Maximum load	[N]	2000
Maximum load torque, dynamic / static	[Nm]	150* / 500
Speed, at no load / at maximum load	[mm/s]	19 / 15
Available input voltages	[Vdc]	24
Minimum ordering stroke (S)	[mm]	200
Maximum ordering stroke (S)	[mm]	600
Operating temperature limits	[°C]	0 to +40
Full load duty cycle @ 20 °C	[%]	15
Maximum on time	[s]	60
Lead cross section	[mm <sup>2</sup> ]	1.5
Standard cable length	[mm]	2000
Protection class		IP44

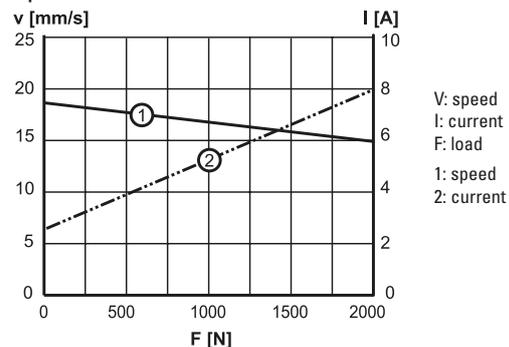

\* Higher dynamic loads up to 400 Nm available upon request, contact customer support.

## Compatible Controls

Control model	See page
DCG-180 for operation of single unit	66
DCG-280 for synchronous operation of two units	66

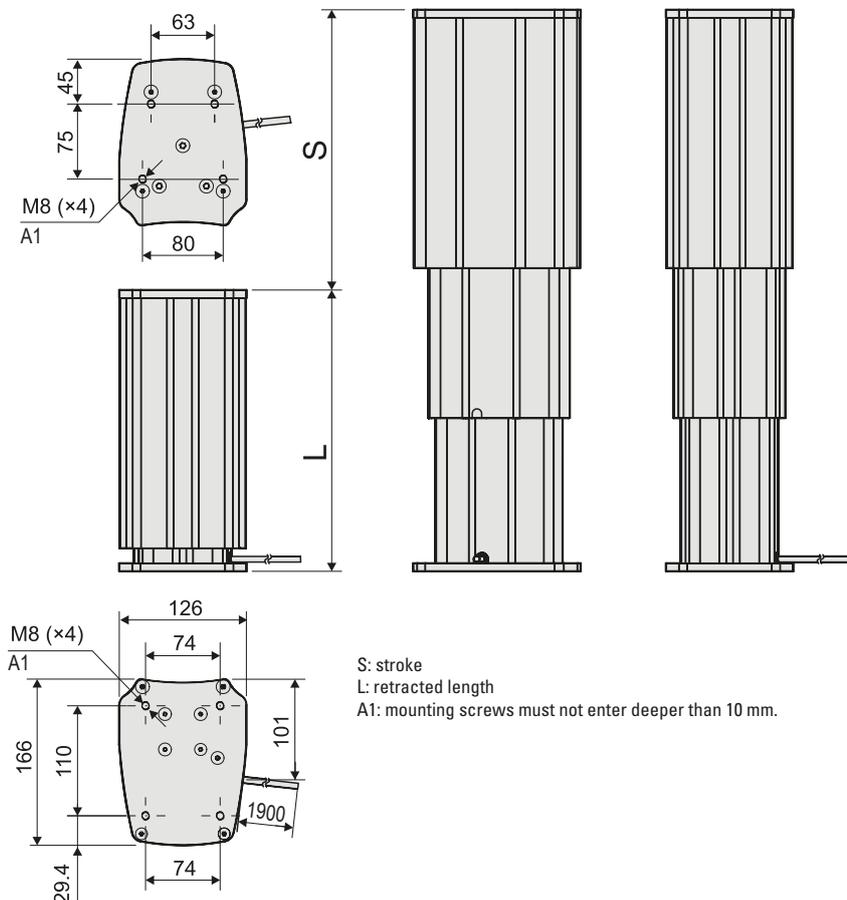

## Performance Diagrams

### Speed and Current vs. Load

# Lifting Column LC2000

24 Vdc - load up to 2000 N

Stroke, retracted length and weight relationship		Minimum	Maximum
Stroke (S)	[mm]	200	600
Retracted length (L)	[mm]	250 or L min	441
Min. retracted length (L min) based on stroke (S)	[mm]	$L \text{ min} = (S + 282) / 2$	
Weight of unit based on stroke (S)	[kg]	$\text{Weight} = 3.4 + L \text{ [mm]} \times 0.0203 + S \text{ [mm]} \times 0.001$	

The desired stroke (S) will determine the minimum retracted length (L min) and the weight of the unit. Units can be built with a retracted length (L) between the calculated L min value and maximum retracted length.

Examples of strokes and the resulting minimum retracted length (L min) and weight										
Stroke (S)	[mm]	200	250	300	350	400	450	500	550	600
Minimum retracted length (L min)	[mm]	250	266	291	316	341	366	391	416	441
Weight	[kg]	8.7	9.1	9.7	10.2	10.8	11.3	11.9	12.4	13

# Lifting Column LC3000

24 Vdc - load up to 3000 N

» Ordering Key - see page 81

» Glossary - see page 85

» Electric Wiring Diagram - see page 57

## Standard Features and Benefits

- For medical and ergonomic automation applications
- Self supporting column in extruded anodized aluminum
- Low weight and quiet operation
- Smooth operating ball screw drive
- High load torque capability
- Short retracted length
- Maintenance free
- Load holding brake
- Integrated end of stroke limit switches

## General Specifications

Parameter	LC3000
Screw type	ball screw
Internally restrained	yes
Manual override	no
Dynamic braking	no <sup>(1)</sup>
Holding brake	yes
End of stroke protection	end of stroke limit switches
Mid stroke protection	no <sup>(1)</sup>
Motor protection	no <sup>(1)</sup>
Motor connection	cable
Motor connector	Molex 8 pin plug
Certificates	CE
Options	encoder position feedback

(1) Dynamic braking, mid-stroke protection, and motor protection are provided when used with DCG control.

## Performance Specifications

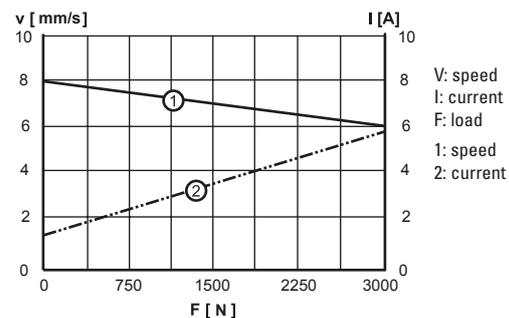

Parameter		LC3000
Maximum load	[N]	3000
Maximum load torque, dynamic / static	[Nm]	400 / 500
Speed, at no load / at maximum load	[mm/s]	8 / 6
Available input voltages	[Vdc]	24
Minimum ordering stroke (S)	[mm]	200
Maximum ordering stroke (S)	[mm]	400
Operating temperature limits	[°C]	0 to +40
Full load duty cycle @ 20 °C	[%]	10
Maximum on time	[s]	60
Lead cross section	[mm <sup>2</sup> ]	1.5
Standard cable length	[mm]	1900
Protection class		IP44

## Compatible Controls

### Speed and Current vs. Load

# Lifting Column LC3000

24 Vdc - load up to 3000 N

S: stroke  
 L: retracted length  
 A1: mounting screws must not enter deeper than 10 mm.

Stroke, retracted length and weight relationship			
		Minimum	Maximum
Stroke (S)	[mm]	200	400
Retracted length (L)	[mm]	330 or L min	530
Min. retracted length (L min) based on stroke (S)	[mm]	$L \text{ min} = S + 130$	
Weight of unit based on stroke (S)	[kg]	$\text{Weight} = 4.065 + ((0.01774 \times L \text{ [mm]}) - 0.6031) + (S \text{ [mm]} + 70) \times 0.0012$	

The desired stroke (S) will determine the minimum retracted length (L min) and the weight of the unit. Units can be built with a retracted length (L) between the calculated L min value and maximum retracted length.

Examples of strokes and the resulting minimum retracted length (L min) and weight						
Stroke (S)	[mm]	200	250	300	350	400
Minimum retracted length (L min)	[mm]	330	380	430	480	530
Weight	[kg]	9.7	10.6	11.6	12.5	13.5

# Lifting Column DMD

12, 24 and 36 Vdc - load up to 6800 N

» Ordering Key - see page 81

» Glossary - see page 85

» Electric Wiring Diagram - see page 56

## Standard Features and Benefits

- Designed for industrial use
- Rugged, robust and strong
- Self supporting column in extruded anodized aluminum
- Acme or ball screw drive
- High load torque capability
- Overload clutch for mid and end of stroke protection
- T-slot grooves along the entire profile
- Maintenance free

## General Specifications

Parameter	DMD
Screw type	acme or ball
Internally restrained	yes
Manual override	no
Dynamic braking	no
Holding brake acme screw models ball screw models	no, self-locking yes
End of stroke protection	overload clutch
Mid stroke protection	overload clutch
Motor protection	auto reset thermal switch
Motor connection	cable
Motor connector	no
Certificates	CE
Options	potentiometer*

\* For encoder feedback, contact customer support.

# Rodless Actuator LM80-H

## 12 and 24 Vdc - load up to 2000 N

### Standard Features and Benefits

- Rodless actuator for horizontal operation
- For use in domestic, office or medical applications
- Rigid self supporting extruded aluminum profile
- Durable and corrosion free
- Lightweight and quiet operation
- Safety nut on ball screw versions
- Easy and fast T-slot mounting
- Maintenance free

### General Specifications

Parameter	LM80-H
Screw type	trapezoidal or ball
Internally restrained	yes
Manual override	no
Dynamic braking	no
Holding brake	no
End of stroke protection	spring loaded soft stop
Mid stroke protection	no
Motor protection	no
Motor connection with motor enclosure no motor enclosure	cable no cable, clips on motor
Motor connector with motor enclosure no motor enclosure	8-pole Molex mini-fit jr clips on motor
Certificates	CE
Options	<ul style="list-style-type: none"> <li>• no motor enclosure</li> <li>• manual override</li> <li>• alternative motor positions</li> <li>• stroke over 1500 mm*</li> <li>• encoder *</li> </ul>

# Rodless Actuator LM80-I

24 Vdc - load up to 2000 N

## Standard Features and Benefits

- Rodless actuator for vertical operation with motor down
- For use in domestic, office or medical applications
- Rigid self supporting extruded aluminum profile
- Durable and corrosion free
- Holding brake prevents downward motion at power off
- Lightweight and quiet operation
- Safety nut on ball screw versions
- Easy and fast T-slot mounting
- Maintenance free

## General Specifications

Parameter	LM80-I

## Definition of Forces

# Electrak® Non-driven Actuator PPA-M

» Ordering Key - see page 84  
» Glossary - see page 85

Load up to 6670 N

## Standard Features and Benefits

- Actuator with double input shafts to which a customer supplied motor or/and an intermediate shaft can be mounted
- Can be operated manually
- Robust and versatile
- Withstands very harsh environments
- Highly efficient ball screw drive system
- Holding brake prevents back driving
- Trunnion to clevis mounting
- Maintenance free

## General Specifications

Parameter	Electrak PPA-M
Screw type	ball
Internally restrained	no
Manual override	no*
Holding brake	yes
End of stroke protection	no
Mid stroke protection	no
Certificates	–
Options	protective bellows

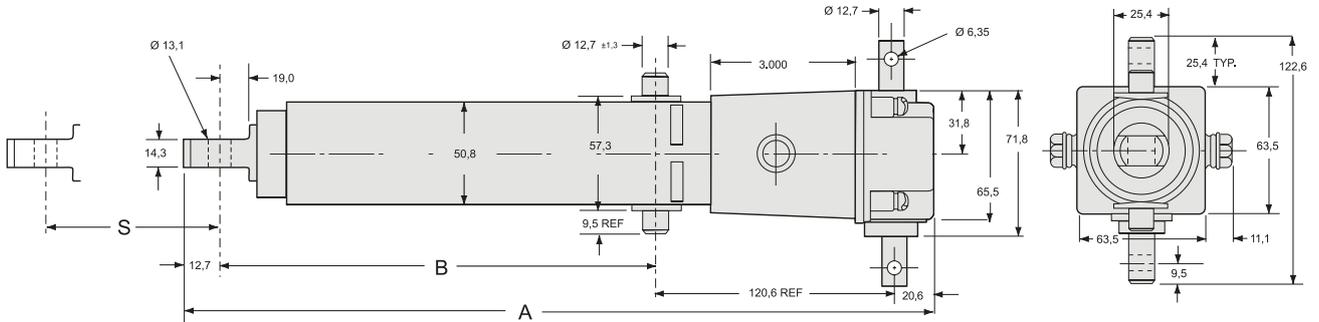

\* Either of the two input shafts can be used for manual operation if both shafts are not connected to a motor or an intermediate shaft.

## Performance Specifications

Parameter		PPA-M
Maximum load, dynamic / static	[N]	6670 / 13350
Maximum speed at max. load	[mm/s]	8
Maximum input torque	[Nm]	9
Maximum input speed	[rpm]	100
Standard stroke lengths	[in]	4, 8, 12, 18, 24, 36
Operating temperature limits	[°C]	-25 – +65
End play, maximum	[mm]	1,0
Restraining torque	[Nm]	23

# Electrak® Non-driven Actuator PPA-M

Load up to 6670 N

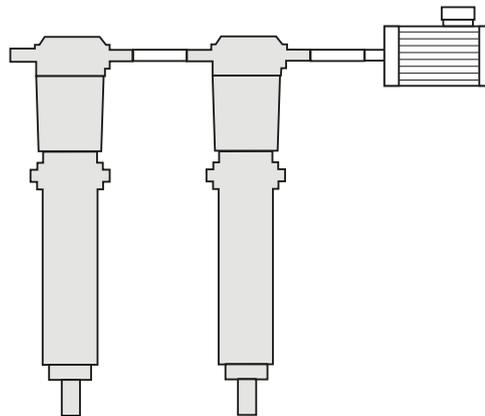

S: stroke  
 A: retracted length  
 B: retracted length to trunnions

<b>Stroke (S)</b>	[mm]	101,6	203,2	304,8	457,2	609,6	914,4

<b>Weight</b>	[kg]	3,4	4,2	4,8	6,1	7,3	9,7

## Synchronous Operation

Two or more PPA-M actuators can easily be mechanically linked for synchronous operation by using intermediate shafts. The intermediate shafts and necessary couplings are provided by the customer.

# Electrak® Non-driven Actuator FA14

» Ordering Key - see page 84  
» Glossary - see page 85

Load up to 6800 N

## Standard Features and Benefits

- Actuator with a flange where a customer supplied motor can be mounted
- Rugged and robust
- Withstands very harsh environments
- Stainless steel extension tube
- Corrosion free aluminium cover tube
- Acme or ball screw drive
- Trunnion mounting possible
- Overload clutch for mid and end of stroke protection
- T-slot grooves in the cover tube for magnetic sensors
- Maintenance free

AKM3x-AN	Ø90	50	Ø75	60	73
AKM4x-AN	92x92	74	Ø100	80	91,5

Note: Optional flanges are available separately as conversion kits. Part number see page 84.

# Electrical Wiring Diagrams

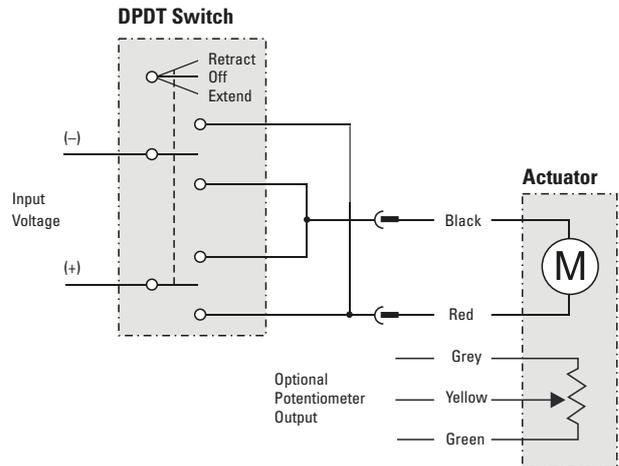

## DC-actuators

### Electrak 1 and 1SP

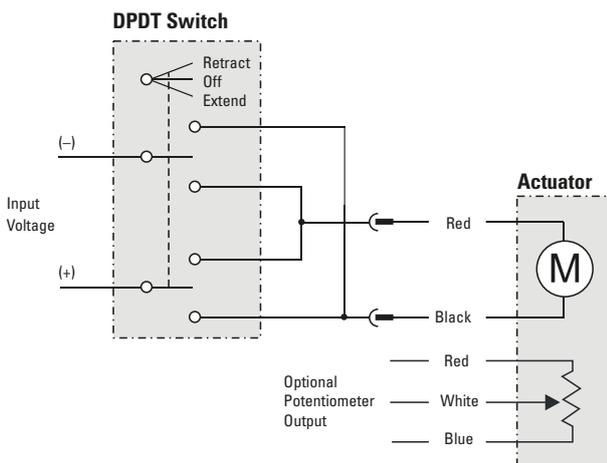

Connect the yellow lead to positive and black, white or blue\* to negative to extend the actuator. Change polarity to retract the actuator. The potentiometer output has 0 ohm between white and red when the actuator is fully retracted. The actuator should be protected from overload conditions by a customer provided fuse in the circuit (6 A for 12 Vdc, 3 A for 24 Vdc and 2 A for 36 Vdc).

### Electrak 10, LA14

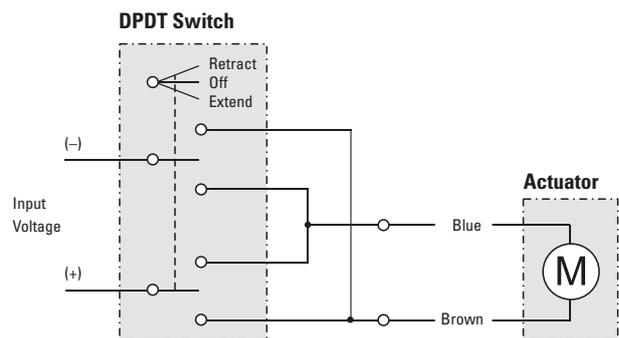

Connect the red lead to positive and black to negative to extend the actuator. Change polarity to retract the actuator. The potentiometer output has 0 ohm between grey and yellow when the actuator is fully extended.

### Electrak 050

Connect the black lead to positive and red to negative to extend the actuator. Change polarity to retract the actuator. The potentiometer output has 0 ohm between white and red when the actuator is fully retracted.

### DMD

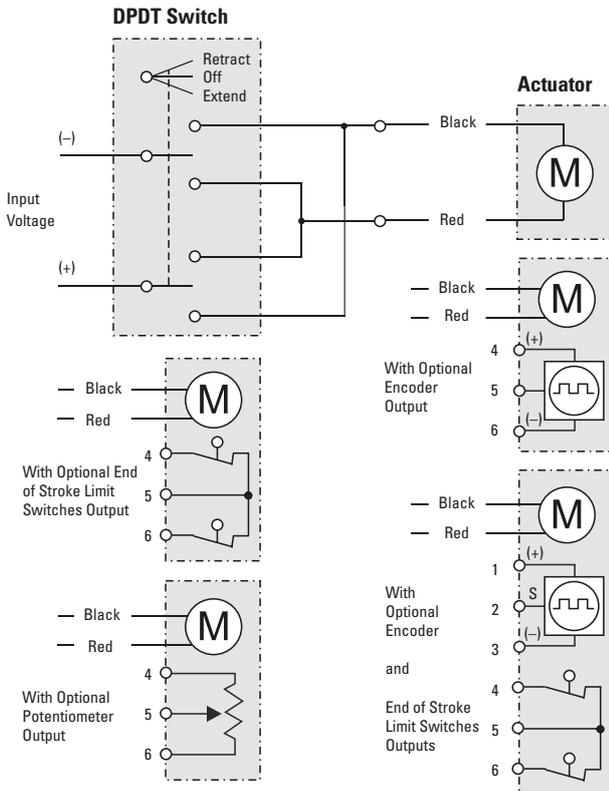

Connect the brown lead to positive and blue to negative to extend the actuator. Change polarity to retract the actuator.

# Electrical Wiring Diagrams

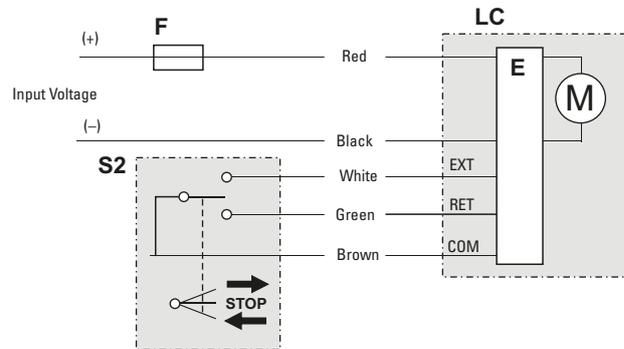

## DC-actuators

### Electrak PPA-DC

Connect the black lead to positive and red to negative to extend the actuator. Change polarity to retract the actuator. The encoder is supplied with 4,5 - 12 Vdc between terminals 4 or 1 and 6 or 3 and the pulse train signal is generated on terminal 5 or 2. The potentiometer output has 0 ohm between terminal 4 and 5 when the actuator is fully retracted.

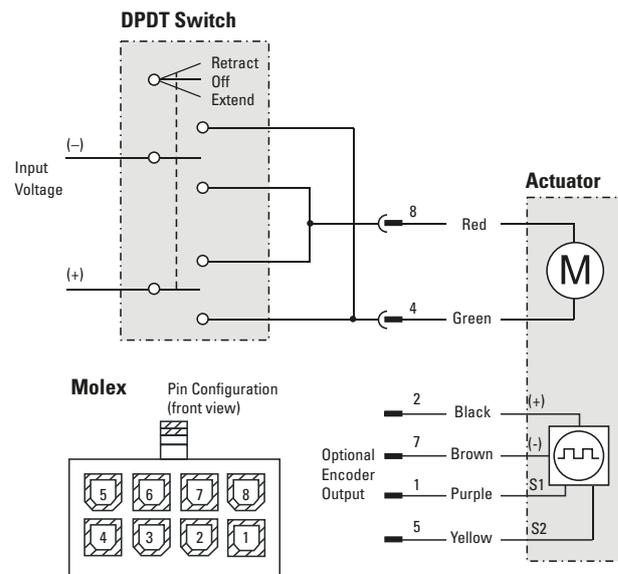

### LC1600

Connect the white (EXT) and brown (COM) leads to extend the actuator. To retract the actuator connect the green (RET) and brown (COM) leads. The actuator will automatically switch off when reaching the ends of stroke or a mid-stroke overload.

With encoder feedback (NE) or with no feedback options (NX): For the LC1600, only use the NE and NX versions with the DCG control.

### LC2000 / 3000, LM80-H/ -V / -I

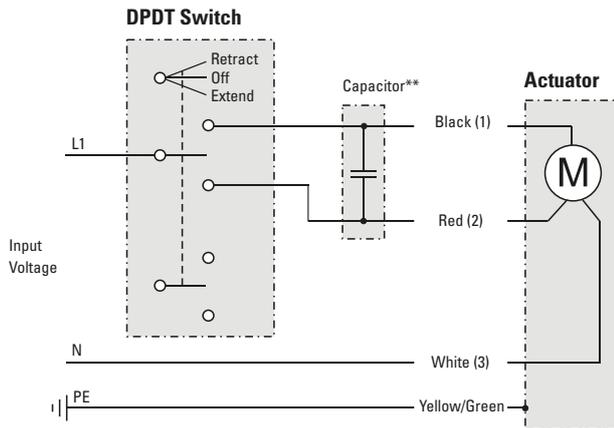

Connect the green lead to positive and red to negative to extend the actuator. Change polarity to retract the actuator. The encoder is supplied with 5 - 18 Vdc on pin 2 and 7 and the two pulse train signals are generated on pin 1 and 5.

# Electrical Wiring Diagrams

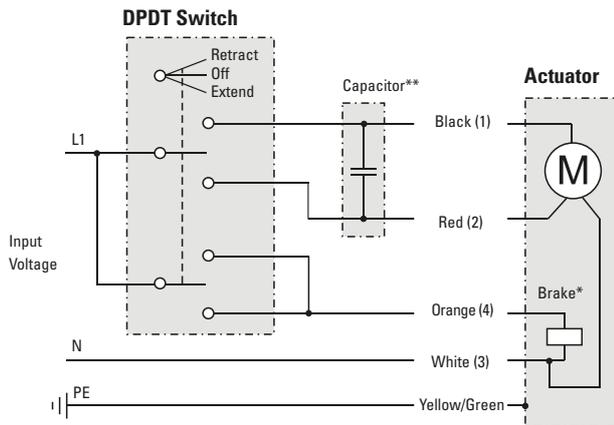

## AC-actuators

### Electrak 5, LA24 and DMA - 1 × 230 Vac

Without anti coast brake\*

With anti coast brake\*

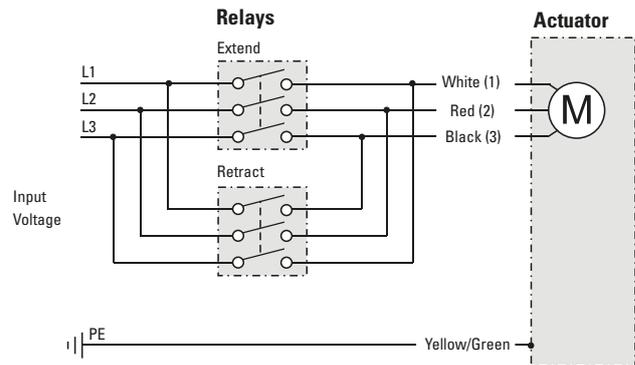

\* Anti coast brake is standard on Electrak 5 / LA24 for ball screw models and optional for acme screw models. On DMA there are no anti coast brake on acme models while ball screw models always are equipped with an anti coast brake.

\*\* 10  $\mu$ F capacitor required to run the actuator, p/n 9200-448-003.

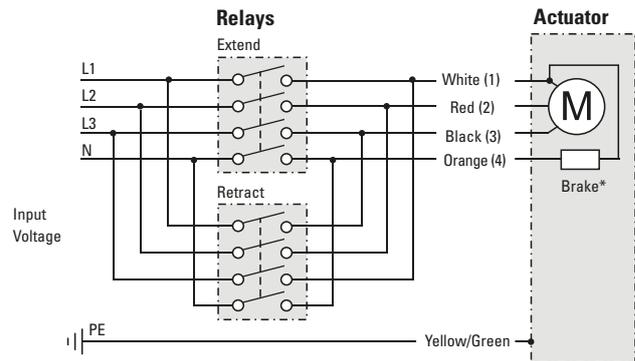

Leads can be either color or number marked. Connect black (1) lead to L1 and white (3) lead to N (neutral) to retract the actuator. Change L1 from lead black (1) to lead red (2) to extend the actuator. If the actuator is equipped with an anti coast brake, release the brake by connecting orange (4) lead lead to L1.

### Electrak 5, LA24 and DMA - 3 × 400 Vac

Without anti coast brake\*

With anti coast brake\*

\* Anti coast brake is optional on Electrak 5 / LA24 on both acme and ball screw models. On DMA there are no anti coast brake on acme models while ball screw models always are equipped with an anti coast brake.

Leads can be either color or number marked. Connect white (1) lead to L1, red (2) lead to L2 and black (3) lead to L3 to extend the actuator. Change the places of white (2) lead and black (3) to retract the actuator. If the actuator is equipped with an anti coast brake, release the brake by connecting orange (4) lead lead to N (neutral).

# Electrical Wiring Diagrams

## DC-actuators

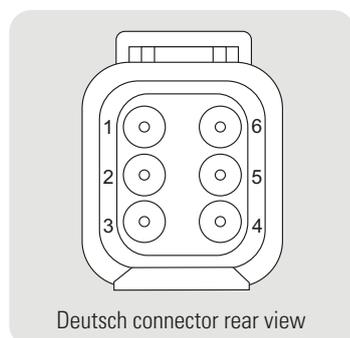

### Electrak Throttle

Connect the actuator according to the table below. Actuator will extend if connected as in the table, shift polarity between red (pin 1) and black (pin 3) leads and it will retract. Mating Deutsch connector kit can be ordered from Thomson (P/N 9100-448-021). Note: Connector pin 2 is not used, but contains a sealing plug.

Option name and order key code	Lead color or Deutsch DTM04-6P connector pin number				
	Red (1)	Black (3)	Brown (4)	White (5)	Green (6)
Analog position feedback sensor (NP)	Motor (+)	Motor (-)	VDC in (+)	VDC out	VDC in (-)
End of stroke limit switches (FN)	Motor (+)	Motor (-)	-	-	-
Analog position feedback sensor and limit switches (FP)	Motor (+)	Motor (-)	VDC in (+)	VDC out	VDC in (-)
CANBUS SAE J1939 (CN)	Power (+)	Power (-)	CAN High	CAN Shield*	CAN Low

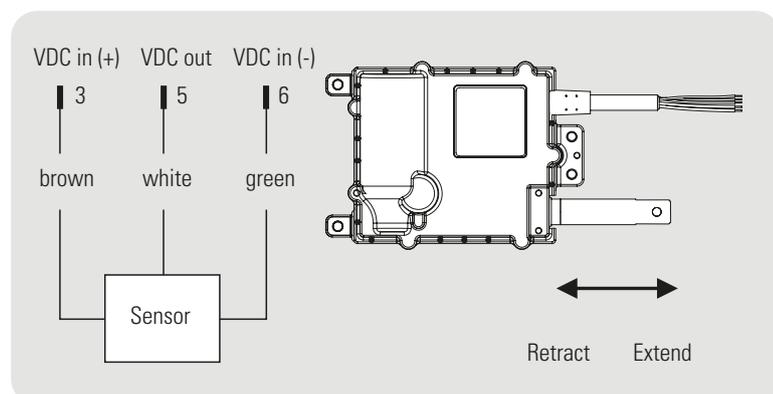

See Installation Manual for additional information.

\* Not required to connect.

### Analog Position Feedback Sensor Installation Data

Brown (pin 3) and green (pin 6) are connected to a voltage source. When extending the actuator the voltage will increase between green (pin 6) and white (pin 5).

### Sensor Specifications

Input voltage, max. (VDC in)	[VDC]	32
Output voltage (VDC out) at fully retracted at fully extended	[VDC]	< 5 % VDC in > 75% VDC in
Max. output current	[mA]	1
Linearity	[± %]	1

## Actuator Controls

### General

Whether you plan to operate from a simple pushbutton or a programmable controller, Thomson controls can make your system easy to design, install and operate. Designed to drive actuators, the controls on the following pages are equipped either with easy to use terminal strips or plugs compatible with the actuators for ease of wiring. The controls can be operated manually via external push buttons/switches, hand held pendants or from electronic controls such as a PLC. We also have other actuator controls which may meet your particular needs. Contact customer service if you don't see the right control for your application.

# Actuator Controls

## Switches

### DPDT Switch

- Robust switch
- Double pole, double throw (DPDT)
- 15 A rating at 270 Vac
- Center "off"
- Two momentary contacts
- Wiring diagram on label

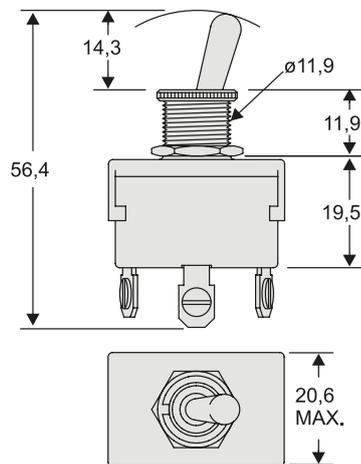

### Specifications

Parameter		DPDT Switch
Maximum voltage	[Vac]	270
Maximum current	[A]	15
Part number		830-8004-016

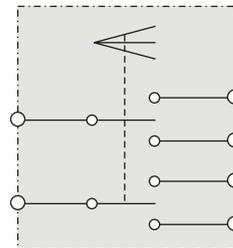

### Actuator Compatibility

Electrak 1, Electrak 1SP, Electrak 050, Electrak PPA-DC, Electrak 10, Electrak LA14, Electrak 5, Electrak Throttle, Electrak LA24, LC, DMD, DMA, LM80-H, LM80-V, LM80-I, DGB

### Dimensions

### Wiring Diagram

**!** Note: sometimes the switch can manage higher current than the actuator and sometimes it is the other way around. Always make sure that both the switch and the actuator can manage the current that the application require.

# Actuator Controls

## Electronic Controls

### Control AC-063

- Rugged and robust control designed to operate under the hardest conditions
- Auto shut off function if the current or duty cycle limits of the control is exceeded.
- Robust plastic enclosure
- Versions for DC or AC supply voltage
- Versions with or without limit switch inputs
- Versions with or without control pendant

### Actuator Compatibility

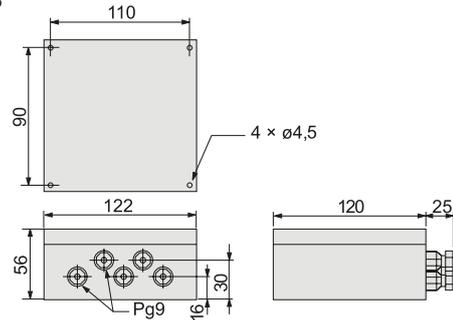

AC-063B	Electrak PPA-DC, Electrak 10, Electrak LA14, DMD
AC-063BC	Electrak PPA-DC, Electrak 10, Electrak LA14, DMD
AC-063C	Electrak PPA-DC, Electrak 10, Electrak LA14, DMD

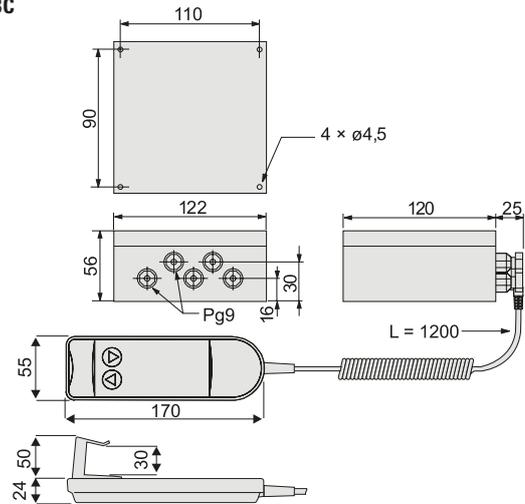

Note: sometimes the control can manage higher current and/or duty cycle than the actuator and sometimes it is the other way around. Always make sure that both the control and the actuator can manage the current and duty cycle that the application require.

# Actuator Controls

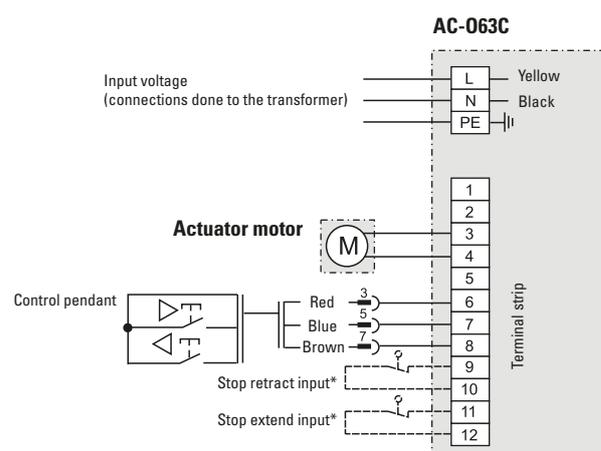

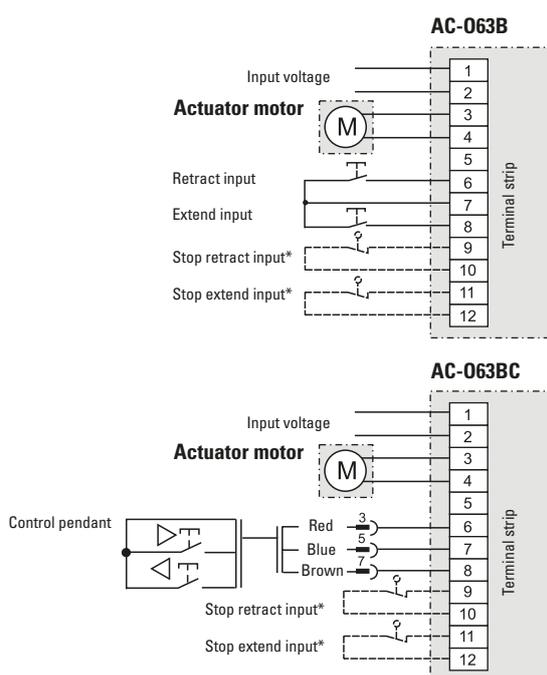

## Electronic Controls

### Control AC-247 ELS

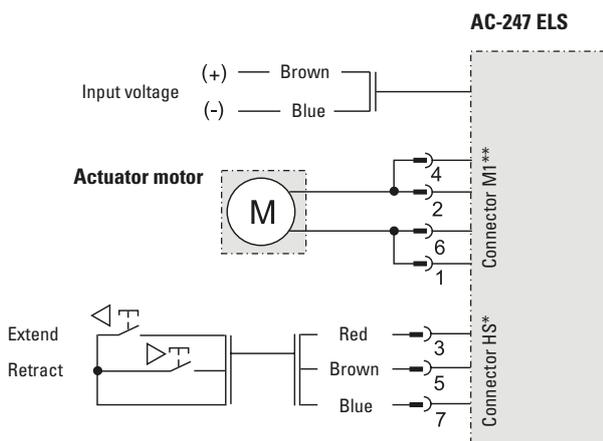

- Compact, robust and light weight
- Electronic limit switches (ELS) stop the actuator at end of stroke if the actuator runs into an obstacle
- Connector input for DCG14-1H control pendant

### Actuator Compatibility

Electrak 1, Electrak 1SP, Electrak 050, LM80-H, LM80-V, LM80-I

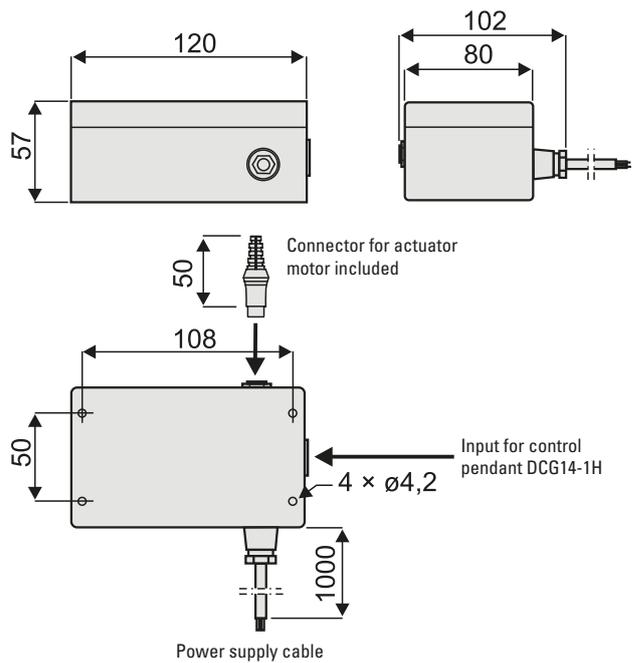

### Wiring Diagram

\* The diagram shows the control connected to control pendant DCG14-1H, but any type of normally open contacts can be used to control the direction of the actuator.

\*\* Each motor lead must be connected to two pins in the connector in order to not exceed the current limit of the connector.

### Dimensions

Note: sometimes the control can manage higher current and/or duty cycle than the actuator and sometimes it is the other way around. Always make sure that both the control and the actuator can manage the current and duty cycle that the application require.

» Glossary - see page 85

### Control DCG

- Controls available for single actuator operation or synchronous operation of two actuators equipped with encoders.
- Small and light weight control operated via a control pendant which is ordered separately
- Built in Electronic Limit Switches (ELS) stop the actuator automatically at end of stroke or mid stroke stall
- The control pendant is ordered separately
- The “Control to Actuator” cable is ordered separately and comes in several version depending of the type of actuator being used

### Dimensions

### Wiring Diagram

No wiring is necessary to the control. All connections are done through plugs.

### Actuator Compatibility

DCG-150	Electrak 1, Electrak 1SP, Electrak 050 <sup>1</sup> , Max Jac, LC1600
DCG-160	LM80-V
DCG-170	LM80-H
DCG-180	LC2000, LC3000, LM80-I
DCG-190	LA10, LA14, PPA-DC, DMD
DCG-250	Synchronous operation of two LC1600 <sup>2</sup>
DCG-260	Synchronous operation of two LM80-I <sup>2</sup>
DCG-280	Synchronous operation of two LC2000, LC3000 <sup>2</sup>

<sup>1</sup> This control does not work with Electrak 050 that has the limit switch option (“FS” or “PF” option).

<sup>2</sup> The units must be equipped with encoders. LM80-I can not have spline safety function.

Note: sometimes the control can manage higher current and/or duty cycle than the actuator and sometimes it is the other way around. Always make sure that both the control and the actuator can manage the current and duty cycle that the application require.

# Actuator Controls

## Electronic Controls

### DCG Controls Overview

Specifications									
Parameter	DCG-150	DCG-160	DCG-170	DCG-180	DCG-190	DCG-250 <sup>7</sup>	DCG-260 <sup>5</sup>	DCG-280 <sup>8</sup>	
Input voltage <sup>1</sup> [Vac]	1 × 230 ± 6%								
Input frequency [Hz]	50/60								
Output voltage [Vdc]	24								
Output current, max. <sup>2</sup>									
up [A]	4	8	8	8	13	4	2 × 8	2 × 8	
down [A]	4	5,6	8	8	13	4	2 × 5,6	2 × 8	
Operating temperature limits [°C]	+0 – +30								
Max. duty cycle @ 25 °C <sup>3</sup> [%]	10								
Maximum on time [s]	60	120	120	60	60	60	60	60	
Weight of control [kg]	0.5								
Protection class	Class 1 (not for outdoor use)								
Electronic limit switches	yes	yes	yes	yes	yes	yes <sup>6</sup>	yes <sup>6</sup>	yes <sup>6</sup>	
Included control pendant <sup>4</sup>	no								
Certificates	CE								

<sup>1</sup> 115 Vac input voltage also available. Contact customer support.

<sup>2</sup> These controls are current limited. Review the current/load curves for the actuator you selected to make sure the control will provide enough current for the thrust you need. You may need to select one of the AC-063 or AC-247 ELS controls.

<sup>3</sup> Control will shut off if duty cycle is exceeded and automatically reset when cooled off.

<sup>4</sup> Control pendant type DCG14-1H is recommended, see page 68.

<sup>5</sup> Control for synchronous operation of two LM80-I rodless actuators. Contact customer support for information on synchronous operation of other actuator models.

<sup>6</sup> DCG-250, DCG-260, DCG-280 uses a pulse counting function instead of current sensing to determine if the actuator is moving at the correct speed. If the pulses arrives too slowly or not at all the control will stop the motion of both actuators.

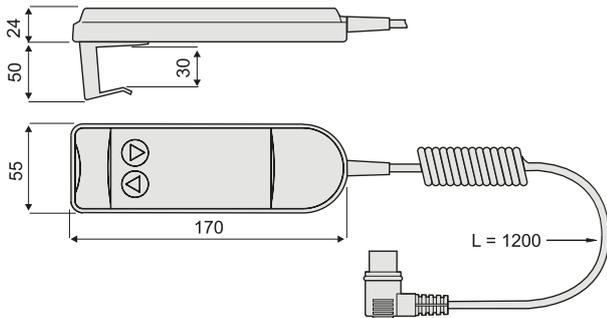

<sup>7</sup> Control for synchronous operation of two LC1600 lifting columns.

<sup>8</sup> Control for synchronous operation of two LC2000 or LC3000 lifting columns. Contact customer support for information on synchronous operation of other actuator models.

## Control Accessories

### DCG Control Pendant

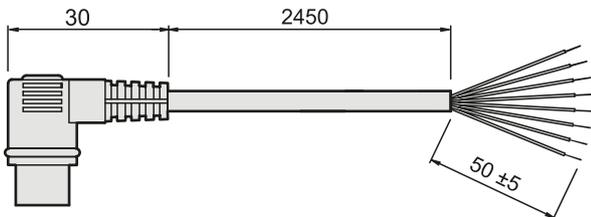

### Specifications

Parameter		DCG14-1H
Weight	[kg]	0,4
Cable length	[mm]	1200
Certificates		CE
Part number		DCG14-1H

- Handy and light weight control pendant with spiral cord cable which connects to the DCG, AC-063 (possible on BC and C versions only) and AC-247 ELS control pendant input with a plug

### Control to Control Cable for DCG, AC-063 and AC-247 ELS Controls

### Specifications

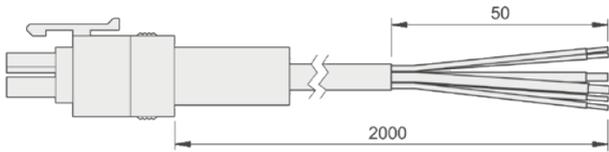

Parameter		
Lead cross section	[mm <sup>2</sup> ]	7 × 0,14
Cable length	[mm]	2450
Part number		D620 095

- This cable connects with its plug to the control pendant input on DCG, AC-063 (possible on BC and C versions only) and AC-247 ELS in order to connect the control to another device than the DCG control pendant

# Actuator Controls

## Control Accessories

### Control to Actuator Cables with Single Connector for DCG Controls

- Connects the DCG control to actuators without connector

### Specifications

Parameter		
Lead cross section [mm <sup>2</sup> ]	4 × 0,25 + 2 × 1,5	4 × 0,25 + 2 × 1,5
Cable length [mm]	2000	4300
Part number	D620 143	D620 145

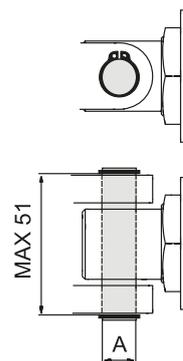

# Accessories and Spare Parts

## Mounting Components

### Mounting Pin Kits

Designation	Compatible Actuators	A [mm]	Part Number
Mounting pins (pair)	Electrak 10, Electrak 5	12,7	D603 028
Mounting pins (pair)	Electrak LA14, LA24, FA14	12	D603 023

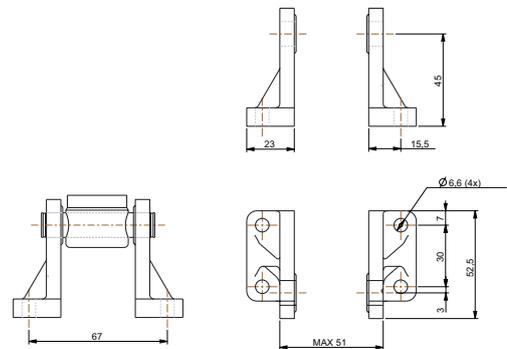

The mounting pins are used in the rear and front adapter holes of the actuator. The pins have a groove in each end so that it can be secured with snap rings.

### Mounting Pin Bracket Kits

Designation	Compatible Actuators	Part Number
Mounting pin brackets (pair)	Electrak LA14, LA24, FA14	D603 029

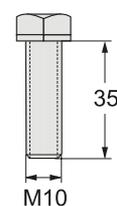

The mounting pin brackets are used to attach the front and rear adapter via a pair of mounting pins to the objects to which it is mounted. Note! one pair of brackets is needed per adapter as there must be a bracket on each side of the adapter.

### T-slot Bolt

Designation	Compatible Actuators	Part Number
M10 T-slot bolt	DMD, DMA	D800041

The T-slot bolt fits in to the T-slot running along the outer profile of DMD and DMA lifting columns. The T-slot bolts can be used to mount the unit instead of using the upper mounting plate, or/and for attaching other components to the profile.

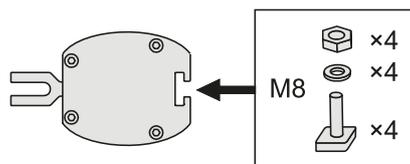

# Accessories and Spare Parts

## Mounting Components

### T-slot Mounting Kit

Designation	Compatible Actuators	Part Number
M8 T-slot mounting kit	LM80-H, LM80-V, LM80-I	D680507

The T-slot mounting kit consists of four T-slot bolts, washers and nuts that fit in to the T-slot running along the profile of LM80 rodless actuators. The T-slot mounting kit can be used to mount the unit or/and for attaching other components to the profile.

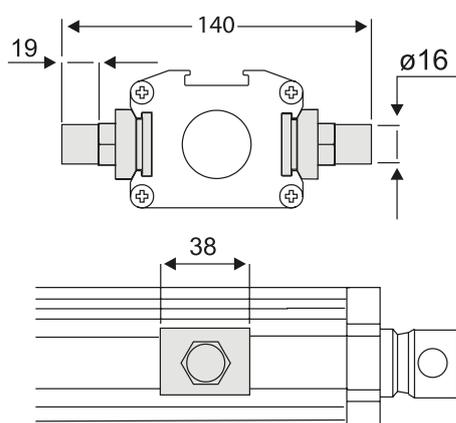

### Trunnion Mounting Kits

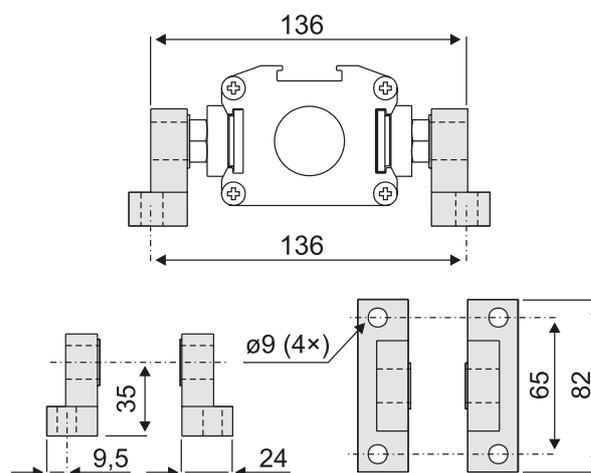

Designation	Compatible Actuators	Part Number
Trunnions (pair)	Electrak LA14, LA24, FA14	D603 022
Trunnion brackets (pair)	Electrak LA14, LA24, FA14	D603 030

The trunnions can be mounted to the T-slot running along the right and left side of the cover tube on an Electrak LA14, LA24 or FA14.

#### Trunnions

#### Trunnion Brackets

# Accessories and Spare Parts

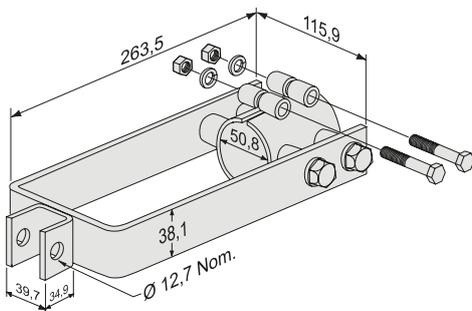

## Mounting Components

### PPA Rear Clevis Mounting Kits

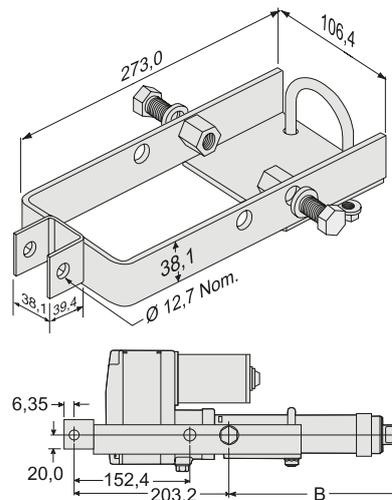

Designation	Compatible Actuators	Part Number
PPA rear clevis mounting kit for DC actuators	Electrak PPA-DC	7827320
PPA rear clevis mounting kit	Electrak PPA-DC	7824295

The rear clevis mounting kits are attached to the tube of an Electrak PPA actuator allowing the actuator to be mounted clevis to clevis style. Note that one of the kits fits both PPA-DC and PPA-AC actuators while the other only fits PPA-DC actuators.

#### PPA Rear Clevis Mounting Kit

#### PPA Rear Clevis Mounting Kit for DC Actuators

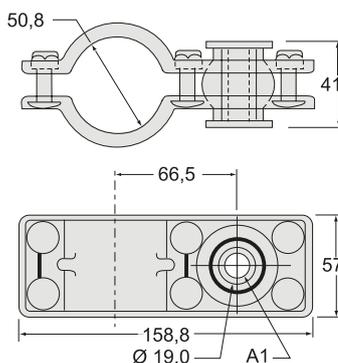

B: retracted length to trunnion, also see product pages.

### PPA Tube Mounting Kits

Designation	Compatible Actuators	Part Number
Electrak PPA tube mount - light duty 3330 N	Electrak PPA-DC	7822520
Electrak PPA tube mount - heavy duty 6670 N	Electrak PPA-DC	7821783

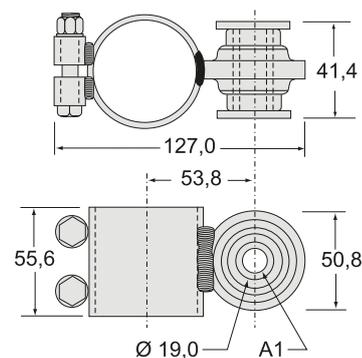

The tube mounting kits work as a clamp that is mounted at any desired position along the actuator tube. Trunnion pins for the tube mount clamp are supplied and mounted by the customer.

#### Electrak PPA Tube Mount - Light Duty 3330 N

A1: hole diameter 12,7 with bushing.

#### Electrak PPA Tube Mount - Heavy Duty 6670 N

A1: hole diameter 12,7 with bushing.

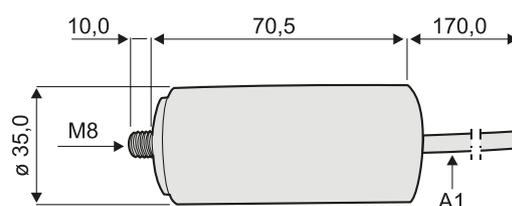

# Accessories and Spare Parts

## Electrical Components

### Capacitor Kits

Designation	Compatible Actuators	Actuator Supply Voltage	Part Number
Capacitor kit	Electrak 5, LA24, DMA	115 Vac	9200-448-002
Capacitor kit	Electrak 5, LA24, DMA	230 Vac	9200-448-003

All 230 and 115 Vac actuators require a capacitor to be wired between the windings to run. The capacitor needs to be mounted externally by the customer. Also see the Electrical Wiring Diagrams section.

A1: cable  $2 \times 0,75 \text{ mm}^2$

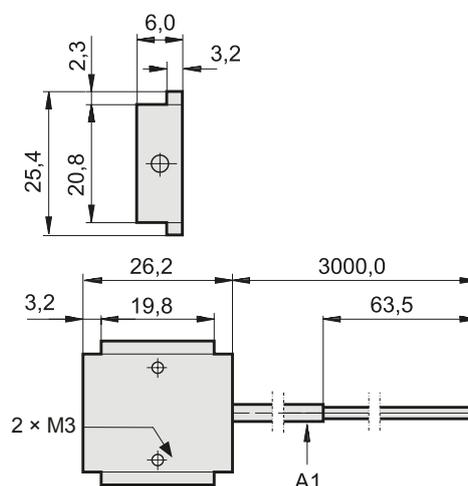

### Magnetic Sensor

Designation	Compatible Actuators	Contact Type	Part Number
Magnetic sensor	Electrak LA14, LA24, FA14	normally open	D535 070
Magnetic sensor	Electrak LA14, LA24, FA14	normally closed	D535 071
Magnetic sensor	Electrak LA14, LA24, FA14	changing	D535 073

### Specifications

Parameter		D535 070 D535 071	D535 073
Maximum power	[W]	10	10
Maximum voltage	[Vdc]	43	43
Maximum current	[A]	0,5	0,5
Maximum contact resistance	[ohm]	0,2	0,2
Lead cross section	[mm <sup>2</sup> ]	$2 \times 0,14$	$3 \times 0,14$
Cable length	[mm]	3000	3000
Protection class		IP67	IP67

The magnetic sensor fits in to the T-slot running along three sides of the cover tube on an Electrak LA14, LA24 or FA14. The normally closed sensors can be used with AC-063 controls that have limit switch inputs. The cable is molded into the switch.

# Glossary

## A – C

### Acme Screw

Acme screws are self locking and will not backdrive. They also withstand vibration and shock better than ball or worm screws and are used for applications with these characteristics. Also see “lead screw”.

### Actuator Housing

The actuator housing provides environmental protection for the internal components and may also be a structural member of the actuator.

### Adapters

The front and rear adapters are the connection points for mounting most Thomson actuators. The front adapter is usually a cross hole but optionally may be a tapped hole, threaded rod, or universal rod end. The rear adapter may be cast into the actuator housing or held in place with a nut.

### Adjustable End of Stroke Limit Switches

The adjustable end of stroke limit switches may be moved to positions inside the full stroke of the actuator and will shut off the actuator when it reaches the limit switch. Also see “end of stroke limit switches”.

### Anti Coast Brake/Electrical Brake

Depending on the load, AC ball screw actuators may coast to a stop when power is removed. This overrun is eliminated by an anti coast brake or an electrical brake. The anti coast brake (pawl type) will allow up to one revolution of the motor after power is removed. They are used on the Electrak 5 and PPA-AC with anti coast brake. An electrical brake (electrically released) operates much faster after power is removed and allow less coast than the pawl type. Electrak 205 and the PPA-AC with electrical brake use this type of brake. Also see “brake”.

### Anti Rotation Mechanism

A feature available on some actuators that resolves the restraining torque within the actuator. The extension tube will not rotate on actuators with this feature.

### Auto Reset Thermal Switch

An auto reset thermal will switch off the motor if it becomes too warm which means that the motor has exceeded its maximum allowed duty cycle. When the motor has cooled of the switch will close again automatically and the motor will start to run if power still is being applied to it. Also see “duty cycle”.

### Ball Screw

Ball screws are highly efficient and are used for high loads and speeds. Also see “lead screw”.

### Brake

Actuators using a acme or worm screw are inherently self-locking while ball screw driven actuators are not. To prevent ball screw actuators from backdriving they incorporate an anti backdriving brake (holding brake). Ball screw actuators with an AC motor can also be equipped with an anti coast brake. Also see “anti coast brake/electrical brake” and “holding brake”.

### Capacitor

The AC actuators use permanent split capacitor motors and require the use of a start/run capacitor in the control circuit to operate. The controls for the AC actuators have the capacitor included in the control. For customer supplied controls, a separate capacitor is required and the part number is included on the actuator product page.

### Certificates

CE certification and UL listing are the two main third party approvals available for actuators. Most of the AC actuators are UL listed as standard and UL has no standard for DC actuators under 48 Vdc. All actuators sold in the EU are CE certified while some actuators sold outside of the EU may not be. If you order your actuator outside of the EU and need a CE certification, contact the factory to verify availability and be sure to include the request on your order.

### Controls

Controls can be external to the actuator and provide the actuator with the correct voltage, have either membrane or pendant operators and some have position indicators.

### Cover Tube

The cover tube provides protection for the lead screw and provides protection and support for the extension tube. For the Electrak 100 and PPA and as an option on the Electrak 205 actuators, the cover tube also provides the rear mounting connection.

### Customization

Even the most versatile actuator may not always suit all applications. But whatever your need is, our engineers are ready to help you to customize the actuators according to your requirements. We build more exclusive actuators than anyone else and have decades of experience of producing actuators to meet special needs.

# Glossary

## D – G

### Duty Cycle

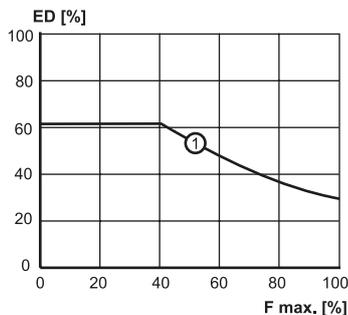

$$\text{Duty cycle} = \frac{\text{on time}}{(\text{on time} + \text{off time})}$$

Example: 15 seconds on, 45 seconds off

$$\frac{15 \text{ s}}{(15 \text{ s} + 45 \text{ s})} = 25\% \text{ duty cycle}$$

The duty cycle is a function of the maximum rated load and the ambient temperature. Ambient temperatures above the stated will affect the duty cycle negatively while lower temperatures and/or lower load will affect it positively. Review the following duty cycle versus load charts when higher duty cycles are needed for Electrak 1, Electrak 10 or DMD actuators.

Electrak 1, Electrak 1SP

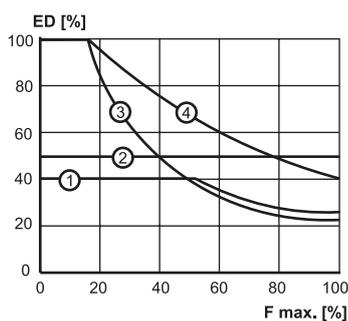

ED: duty cycle in percent at 25° C

F max: percent of maximum rated load

1: all Electrak 1 and Electrak 1SP models

Electrak 10, DMD

ED: duty cycle in percent at 25° C

F max: percent of maximum rated load

1: D •• -10A5 (acme screw)      3: D •• -05B5 (ball screw)

2: D •• -20A5 (acme screw)      4: D •• -20B5 (ball screw)

### Dynamic Load

The dynamic load rating is how much load the actuator will move when power is applied. Also see "load rating".

### Dynamic Braking

Dynamic braking is a feature which short circuits the motor windings at power off resulting in a shorter coasting distance

before the actuator comes to a complete stop. Dynamic braking can be accomplished on other dc actuators by wiring the control to short the motor leads when power is removed.

### Electronic Limit Switches (ELS)

ELS stands for Electronic Limit Switches and it is a current sensing function used in some actuator control models. The ELS senses the current and if the current exceeds a pre-set level the control cuts the power to the motor. This function can be used to detect and stop at the ends of the actuator stroke or to stop the actuator if it runs into an obstacle.

### Electronic Load Monitoring (ELM)

A built-in microprocessor inside the actuators continuously monitors the performance of the actuator. The microprocessor will stop the movement at the end of stroke, in case of mid stroke stall, at overload conditions or if the duty cycle is too high. It also eliminates the need of a clutch and provides dynamic braking.

### Encoder Feedback

Encoders provide a digital output signal that can be used to determine the position of the extension tube. An encoder equipped actuator must return to a "home" position if power is removed and restored in order to reset its starting point. Also see "potentiometer feedback".

### End of Stroke Limit Switches

End of stroke limit switches are switches that are incorporated in some actuator models, either as standard or as an option, that will shut off power when the end of stroke is achieved. Also see "fixed end of stroke limit switches" and "adjustable end of stroke limit switches".

### End Play (Backlash)

The stack up of tolerances within the lead screw assembly and gearing allowing some linear movement of the extension tube without rotating the motor. Typical end play or backlash varies by model. The range is 0,3 to 2,0 mm.

### Extension Tube

The extension tube slides in and out of the actuator and is connected via the front adaptor to the load being moved or positioned.

### Fixed End of Stroke Limit Switches

The fixed end of stroke limit switches allow the full stroke of the actuator to be used and will shut off power when the end of stroke is achieved. Also see "end of stroke limit switches".

# Glossary

## H – Life

### Holding Brake

The Electrak 1, 2, 050 and 150 incorporate an acme screw which is inherently self-locking while Electrak 5, 10, 100 and 205 have a ball screw drive incorporating an anti backdriving brake (holding brake) that engages when the actuator has come to a complete stop. Also see “brake”.

### Input Voltage

The nominal voltage required to operate the actuator. All actuators will accept at least a  $\pm 10\%$  variation of the nominal voltage but a change in the voltage will result in a change of the speed of dc actuators. Controls are available that accept 115 or 230 Vac input and provide 24 Vdc output to operate 24 Vdc actuators.

### Installation Instructions

Each actuator has an installation manual to answer typical questions about mounting and wiring the actuators.

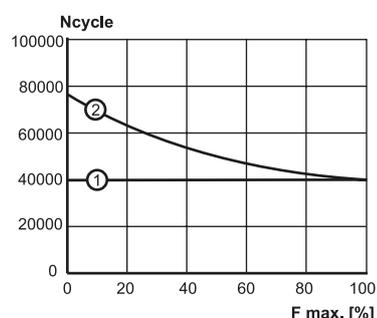

### Lead Screw

Actuators use four different types of lead screws depending on the configuration and load requirements of the actuator. Ball screws are highly efficient and are used for high loads and speeds. Acme, worm and trapezoidal screws are self locking and will not backdrive. Acme and trapezoidal screws withstand vibration and shock better than the other and are used for applications with these characteristics.

### Lifetime Expectancy

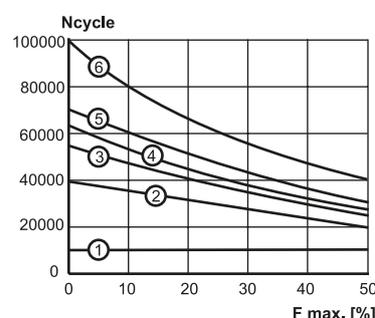

Life is a function of load, stroke length and how often the overload clutch is operated. The following life versus load charts will provide a life estimate for your particular application. Contact customer service for more information or for information on other actuator models.

Electrak 1, Electrak 1SP

Ncycle: life in number of cycles (one cycle = extend and retract)  
 F max: percent of maximum rated load  
 1: Electrak 1 when using the internal limit switches for end of stroke  
 2: both models when using external limit switches for end of stroke

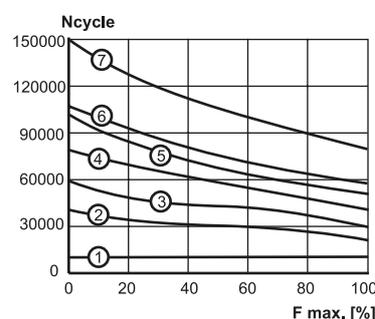

Electrak 10, DMD - Acme Screw Models

Ncycle: life in number of cycles (one cycle = extend and retract)  
 F max: percent of maximum rated load  
 1: all models using the clutch at end of stroke  
 2: D •• -20A5, 12 inch stroke  
 3: D •• -20A5, 8 inch stroke  
 4: D •• -10A5, 12 inch stroke  
 5: D •• -10A5, 8 inch stroke and D •• -20A5, 4 inch stroke  
 6: D •• -10A5, 4 inch stroke

Contact customer service if you need life estimates for loads above 1125 N or stroke lengths above 12 inch.

Electrak 10, DMD - Ball Screw Models

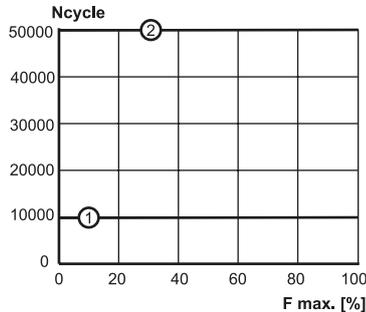

Ncycle: life in number of cycles (one cycle = extend and retract)  
 F max: percent of maximum rated load  
 1: all models using the clutch at end of stroke  
 2: D •• -10B5 and D •• -20B5, 12 inch stroke  
 3: D •• -10B5 and D •• -20B5, 8 inch stroke  
 4: D •• -05B5, 12 inch stroke  
 5: D •• -10B5 and D •• -20B5, 4 inch stroke  
 6: D •• -05B5, 8 inch stroke  
 7: D •• -05B5, 4 inch stroke

Contact customer service if you need life estimates for loads above 4500 N or stroke lengths above 12 inch.

Electrak 5, DMA - Ball Screw Models

# Glossary

## Lift – 0

Ncycle: life in number of cycles (one cycle = extend and retract)  
 F max: percent of maximum rated load  
 1: all models using the clutch at end of stroke  
 2: all models using the anti-coast brake at end of stroke only

The above chart is only valid for ball screw models with rated load up to 4500 N and stroke lengths up to 12 inch. Contact customer service if you need life estimates for acme screw models or for higher loads or longer stroke lengths.

## Lifting Columns

Lifting columns provide a stable base for adjusting the height of tables or platforms. The column provides both the lifting force and the ability to resolve high moment forces from off axis loads.

## Linear Actuators

Actuators providing a linear thrust via an extension tube to lift, lower, push, pull or position a load.

## Load Rating

The load rating is the minimum amount of force the actuator will provide during its lifetime. The load rating of all rod style actuators is the same for both compression and tension loads. Also see “dynamic load”, “static load” and “tension and compression load”.

## Manual Override (Hand Wind)

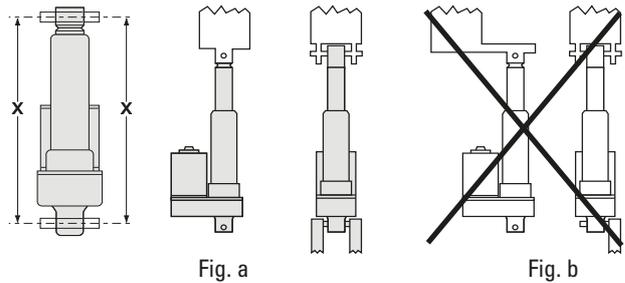

Allows manual operation of the actuator in both directions in case of a power failure. The actuator accepts a standard hexagon key to rotate the motor in either direction. Optional on some models.

## Maximum On Time

The maximum amount of time an actuator may operate without stopping to “cool off”. For high load and long stroke actuators this may be one extend and retract cycle. The actuator should not exceed 25% duty cycle at full rated load. If no maximum on time is stated then the maximum on time are equal to one full cycle at the maximum dynamic load for the actuator in question.

## Mounting

Electrak actuators are quickly and easily mounted by slipping pins through the holes on each end of the unit and into brackets on the machine frame and the load. Electrak 100 units must be mounted by the cover tube and a swivel rod end. PPA actuators are mounted by the rear trunnions on the cover tube and the clevis on the extension tube. The Electrak 205 can be mounted by either the rear clevis or by a tube mount. 12,7 mm diameter solid pins (6,35 mm solid pins for Electrak 1 and 050) provide maximum holding strength and a retaining or cotter pin on each end will prevent the solid pin from falling out of its mounting bracket. Roll or spring type mounting pins should be avoided. The mounting pins must be parallel to each other as shown below (Fig. a). Pins which are not parallel may cause the actuator to bind. The load should act along the axis of the actuator since off center loads may cause binding (Fig. b).

## Non-driven Actuators

Actuators supplied without a motor and driven manually or by a customer supplied motor.

## Operating and Storage Temperature

The operating temperature is the range in which the actuator may be safely operated. For the high end of the range, the duty cycle will be lower than 25%. All actuators can be stored or transported at the same temperature as the operating temperature. Contact customer support if the operating temperature will be exceeded during storage or transportation.

## Output Voltage

Output voltage is the voltage from the control to run the actuator. The controls for dc actuators have 24 Vdc output. The controls for ac actuators have either 115 or 230 Vac output.

## Overload Clutch

Electrak 050, 2, 5, 10, 100, 205 and PPA series linear actuators are protected by a load limiting mechanical clutch which prevents the motor from stalling at either end of the actuator stroke. It will also slip when the factory-set load limit is exceeded. The clutch is a ball detent design, assuring a consistent slip point and long life.

# Glossary

## P – Sp

### Potentiometer Feedback

Potentiometers provide an analog output signal that can be used to determine the position of the extension tube. A potentiometer will “remember” its position if power is removed and restored. All potentiometers are set to a minimum value on full retract except for the EU versions of Electrak 5 and Electrak 10 where the minimum value are set on full extend. Also see “encoder feedback.”

### Protection Class

The protection class refers to the environmental rating of the enclosure. The first digit applies to airborne contaminants and the second digit to water/moisture.

- IP33: protected against the penetration of solid objects with a diameter greater than 12 mm and against direct sprays of water up to 60 degrees from vertical.
- IP44: protected against the penetration of solid objects with a diameter greater than 1 mm and against water sprayed from any direction.
- IP45: protected against the penetration of solid objects with a diameter greater than 1 mm and low pressure water jets from any direction.
- IP51: protected from dust and vertical dripping water/condensation.
- IP52: protected from dust and dripping water/condensation falling at an angle up to 15 degrees from vertical.
- IP56: protected from dust and high pressure water jets from any direction.
- IP65: dust tight and protected against low pressure water jets from any direction.
- IP66: dust tight and protected against high pressure water jets from any direction.
- IP67: dust tight and protected against the effect of immersion in water between 150 mm (5.9 inch) and 1 meter (39.4 inch).

### Pulse Width Modulation (PWM)

Pulse width modulation control works by switching the power supplied to the motor on and off very rapidly. The DC voltage is converted to a square-wave signal, alternating between fully on and zero, giving the motor a series of power “kicks”. If the switching frequency is high enough, the motor runs at a steady speed due to its fly-wheel momentum. By adjusting the duty cycle of the signal (modulating the width of the pulse, hence the ‘PWM’), the time fraction it is “on”, the average power can be varied, and hence the motor speed. All DC actuators can be speed controlled by PWM within certain limits without any adjustments.

Note: Actuators with built-in electronics and CE filters will be affected negatively by the PWM modulation and should not be used together.

### Restraining Torque

The torque which is developed between the clevis on the extension tube and rear mount (clevis or trunnion) when the unit extends or retracts and ratchets the clutch (Fig. c).

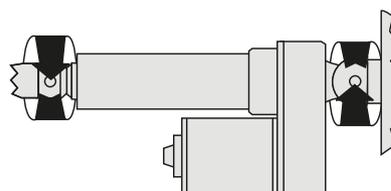

Fig. c

### Rodless Actuators

Rodless actuators provide support for the load as well as thrust. The load is supported and moved by a carriage on the actuator rather than pushed or pulled by an extension rod. Rodless actuators are ideal for applications requiring long strokes (up to 1500 mm), high speeds (up to 110 mm/s), movement of the load within the shortest envelope possible or the load supported by the actuator.

### RoHS Compliance

All actuators, controls and accessories sold in the EU are RoHS compliant unless otherwise stated, while products sold outside of the EU may not be. If you order an actuator outside of the EU and need it to be RoHS compliant, contact the factory to verify availability and be sure to include the request on your order.

### Rotary Actuators

Actuators providing a rotary output to position a load, turn a winch, or rotate a gear or sprocket.

### Service and Maintenance

Actuators are generally maintenance free. The Electrak 2, 5, 10, 100, and 205 have repair kits available from your local distributor or OEM.

### Sizing and Selection

The Thomson web site [www.thomsonlinear.com](http://www.thomsonlinear.com) includes an online tool that can be used to walk through the decision process for picking the best actuator and to get the ordering data for your choice.

### Speed

DC actuators have a direct load/speed relationship. As the load increases, the speed of the dc actuators decreases. There are curves on each product page to show the speed from no load to full rated load. AC actuators have very little speed fluctuations based on load but there are load/speed curves on all the ac actuator product pages.

# Glossary

## Sp – W

### Spline Safety Function

An optional safety function on the rodless actuator (LM80) that will stop downward motion in case the carriage (the moving member) collides with an obstacle. The motor will keep running but the carriage will stand still and not pull down on the obstacle. When reversing the motor rotation the carriage will automatically start to move upwards again.

### Static Load

The static load rating is how much load the actuator will hold with power off. The static load rating is normally twice the dynamic load rating. Also see “load rating”. If nothing else is stated the static load rating is for the actuator extension tube being fully retracted. The static load rating will decrease as the tube extends.

### Synchronous Operation

Motor speed cannot be controlled with enough precision to ensure that the actuators will remain synchronized and a binding effect could take place. Non-driven actuators may be mechanically linked and thereby synchronized. Actuators equipped with an encoder can also be synchronized using controls designed for synchronous operation.

### Tension and Compression Load

A tension load tries to stretch the actuator and a compression load tries to compress the actuator (Fig. d). Most actuators can manage the same tension and compression load. Also see “load rating”.

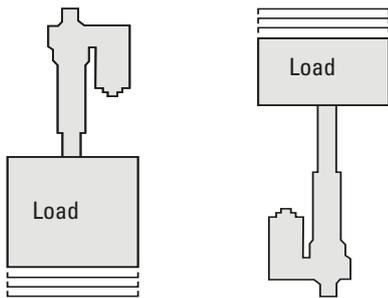

Fig. d

### Trapezoidal Screw

Screw type with similar characteristics as an acme screw. This type of screw is used in LC1600 and LM80. Also see “acme screw” and “lead screw”.

### Vent Tube

The Electrak 050 and 150 have a breather tube in the wiring harness to allow the actuator to operate without creating a vacuum and drawing water through the seals on the cover tube.

### Voltage Drop

Long leads/cables between the power source and the actuator will result in a voltage drop for DC units. This voltage drop can be avoided by sizing the leads in accordance with the following lead

cross section selection table. The table is based on an ambient temperature of 30 °C or less. A higher ambient temperature may result in the need for a greater lead cross section.

Lead Cross Section Selection Table [mm<sup>2</sup>]

Current draw [A]	Cable length [m]	Actuator input voltage [Vdc]		
		12	24	36
0 - 10	0 - 3	1,5	1,5	1,5
	3 - 6	2,5	1,5	1,5
	6 - 10	4	1,5	1,5
10 - 15	0 - 3	1,5	2,5	1,5
	3 - 6	2,5	2,5	1,5
	6 - 10	4	2,5	1,5
15 - 20	0 - 3	2,5	-	-
	3 - 6	4	-	-
	6 - 10	6	-	-
20 - 28	0 - 3	4	-	-
	3 - 6	6	-	-
	6 - 10	10	-	-
28 - 35	0 - 3	6	-	-
	3 - 6	6	-	-
	6 - 10	10	-	-

### Worm Screw

Worm screws are self locking and will not backdrive. This type of screw is used in Electrak 050, Throttle and Max Jac. Also see “lead screw”.
