

MINIMESS®

**HYDROTECHNIK**  
TEST WITH CONFIDENCE

# Preface

## Pioneering technology and innovative solutions

The company philosophy “Test with confidence” has a long tradition at Hydrotechnik. In 1964, the MINIMESS® - ball sealing threaded test point and plug-in coupling was invented and proved to be a major advance for pressure measurement on hydraulic systems.

The benefits of this innovative development were vast because up till then, pressure measurements had been mainly carried out with help of fixed mounted pressure gauges and with enormous expenditure. Now, with Hydrotechnik, the use of pressure sensors and pressure gauges could now be carried out quickly, safely and **without any interruptions** to plant. This is why we say “**Test with confidence**”.

## The next step: New sealing technique

As a consequent development of the MINIMESS® - plug-in and threaded test point with ball sealing from the 60's, the patented leakage-free coupling with soft-sealing was introduced.

The added benefits to our customers were at the forefront of our mind, meaning cleaner handling and new applications in problematic areas like water protection zones and for the first time also in gas application, which established HYDROTECHNIK even further in the market.

## p/T coupling - for requirements in the present and the future

Handling, operating characteristics and quality of the MINI-MESS® - test points have been proved a million times, however “Test with confidence” stands also for research and development. In order to offer more innovative products to our customers, new demands in the automation and robotics sector caused the next development. Our aim was to avoid measuring pressure and temperature with separate sensors. Instead, we wanted to use one common Test Point.

Hydrotechnik developed the p/T - coupling, which was lengthened and designed to accept a temperature probe which actually gets in contact with the medium. Perfect heat transmission between the medium and the temperature sensor is guaranteed.

## Reliability and quality

The high quality standard, connected with large process-security and non-leakage are reached by a modern automatic assembling with integrated leak testing.

Due to this fact, ultra-modern test- and measurement couplings from Hydrotechnik are available to everyone.

**Today, MINIMESS® - couplings are the basic requirement for measuring and testing in industry worldwide, due to its enormous environmental security and economy.**

**Convince yourself and “Test with confidence”.**

**MINIMESS® –**  
**One product for many applications**

Hydraulic control blocks

Mobile load sensing systems

Pump drives

Cylinder controls

Servo valves

M 16 x 2	DN 2	63,0 MPa	Free-cutting steel 1.0718 Stainless steel 1.4571	NBR (Perbunan) FKM (Viton)	8

## MINIMESS®-p/T 1620

Thread of screw-cap	Nominal Bore	Max Pressure	Material	Sealing material	Page
M 16 x 2	DN 2	63,0 MPa	Free-cutting steel 1.0718	NBR (Perbunan) FKM (Viton)	12

## MINIMESS®-1215

Thread of screw-cap	Nominal Bore	Max Pressure	Material	Sealing material	Page
Fixing thread 12	DN 2	63,0 MPa	Free-cutting steel 1.0718 Stainless steel 1.4571	NBR (Perbunan) FKM (Viton)	13

## MINIMESS®-1615

Thread of screw-cap	Nominal Bore	Max Pressure	Material	Sealing material	Page
M 16 x 1,5	DN 2	63,0 MPa	Free-cutting steel 1.0718 Stainless steel 1.4571	NBR (Perbunan) FKM (Viton)	16

## MINIMESS®-1604

Thread of screw-cap	Nominal Bore	Max Pressure	Material	Sealing material	Page
Fixing thread 16	DN 4	40,0 MPa	Free-cutting steel 1.0718	NBR (Perbunan) FKM (Viton)	19

# MINIMESS®-Technical data

Max. working pressure 63 MPa (630 bar) according to ISO 15171-2

## Material

Coupling body and metal cap made of steel 1.0718  
 Note: Unless stated otherwise, all products shown in this catalogue are made of free-cutting steel 1.0718

## Sealing

Internal primary- and secondary sealing as well as sealing for screw-in threads are made of NBR (Perbunan). Option in FKM (Viton).

## Vibration

NBR (Perbunan) and/or FKM (Viton) O-ring to prevent cap loosening due to vibration.

## Screw-in thread

Large range of threads are available.

## Media application

Suitable for hydraulic- and other oils on mineral oil basis

## Temperature ranges at applications with metal cap (standard)

Sealing made of NBR (Perbunan): -25 °C to +100 °C,  
 for a short time, can be also used up to +120 °C

Sealing made of FKM (Viton) as option: -20 °C to +200 °C

Application with plastic cap (option)  
 and for both sealing materials: -20 °C to +100 °C

Application for low temperature: -54 °C on request

Gradually change over to chrome (VI)-free surface treatment

## Thread form data

Thread port according to DIN 3852 part 1 and part 2, form Z (sealed with suitable sealant)

# MINIMESS®-Technical data on DN2 and DN4 microbore hose

## DN 2 and DN 4

Nominal width	Design	Application	$p_n$ in MPa	$p_B$ in MPa	$I_D$ in mm	$A_D$ in mm	$r_{min}$	Operable temperature range	Pressure utilisation factor	
DN 2	Standard 400	Perforated hose	40,0	104,0	2	5	20 mm (below -20 °C 30 mm)	-20 °C up to +100 °C short time up to +120 °C	0 °C 122% 30 °C 110%	
DN 2	Standard 630		63,0	195,0	2	5			50 °C 100% 80 °C 86%	
DN 2	Low temperature		63,0	150,0	2	5		-54 °C up to +100 °C	100 °C 77% 120 °C 68%	
DN 4	Standard 315		31,5	81,0	4	8	40 mm (below -20 °C 60 mm)	-20 °C up to +100 °C short time up to +120 °C	Example for calculation: MINIMESS®-hose DN 2/63 MPa at 30 °C pressure utilisation facto: 63,0 x 1,10 = 69,3 MPa	
DN 4	Standard 450		45,0	150,0	4	8				

Reference of the specified data: 20 °C – 3 K

$p_n$  = operating pressure

$p_B$  = bursting pressure

$I_D$  = internal diameter

$A_D$  = external diameter

$r_{min}$  = Minimum bend radius of hose

Perforated hose = Jacket of hose is perforated for applications using gas

## Definition for the tightness of a MINIMESS®-hose pipe

“Technically tight” describes systems, part systems and functional elements if the leakage rate amounts to  $< 0,00001 \text{ mbar l s}^{-1}$ .

## Criteria for selection of hoses and fittings

### 1. Selection of the hose assembly for the maximum operating pressure ( $p_n$ ):

When ordering a hose assembly, you have to pay attention to the operating pressures of the hose material and of the connection fitting. The lowest pressure determines the max. operating pressure of the complete hose assembly.

### 2. Selection of hose assembly for use with different media:

Hose assemblies can be used with different media, as long as the end connections are suitable. To check the compatibility for different media, please refer to our list on page 37.

If your medium is not mentioned on page 37, please contact us!

## Fittings available with the following materials:

Free cutting steel 1.0718 galvanized and chromated, acid-resistant stainless steel 1.4571 (antimagnetic)

**Safety note:** The hose assemblies have to be protected from flames and sharp-edged, hot objects.

We guarantee a very high quality level of our MINIMESS®-systems, as all components are manufactured very precisely and to tight tolerances. All parts in our MINIMESS®-system are easy and safe to use. We reserve the right to carry out technical modifications!

# Mounting suggestions of MINIMESS<sup>®</sup>-hose assemblies

**Working reliability of a system and lifetime of the hose assembly are dependent on the correct installation. For this, here are some important notes:**

Under load, the length of a hose pipe can change. A shortening causes an additional tensile stress of the hose and the connections. Therefore, the hose pipe needs “slack” in an unpressurised state. Please tighten the union nuts only so far using recommended tightening torques. Further tightening does not improve the operation, but can damage the connections.

With curved assemblies, attention has to be paid to the bending radius. Sharp bends have to be avoided wherever possible. When calculating the length of a hose assembly, you have to pay attention to the fact that the connection fittings are not flexible. The correct calculation of the free hose length between the fittings is therefore essential.

90° hose fittings are also available to aid in the fitting of hose assemblies to maximize life and operation of the assembly.

90° hose fittings can also aid in the fitting of a tidy hose assembly in the tightest of porting requirements.

## Notes for operation and installation

In order to guarantee the operability of hoses and to not reduce assembly life by introducing additional strains, the following points have to be taken into consideration:

- Hose assemblies may not be strained during operation by external influences like tension, torsion and upset.
- The smallest mentioned bending radius of the hose must not be exceeded at any time.
- Hose assemblies have to be protected against external damages caused by thermal, chemical or mechanical influences.
- Painting or marking of hose assemblies should be avoided.

## Notes for storage of hose and hose assemblies

- Store in cool, dry places and avoid direct UV-irradiation.
- Sources of radiant heat should be avoided.
- Ozone building light fittings and electronic instruments with sparking should be kept away from hoses and hose material (e.g. mercury vapor discharge lamps)
- Optimum storage conditions are temperatures between +15°C and +25°C, a relative air humidity of 65%, as well as shielding against UV-radiation by special UV-impervious foils.
- The storage time should not exceed four years for hose and two years for hose assemblies.

# MINIMESS®-DN 2 microbore hose assemblies

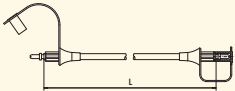

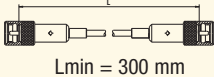

For 1620, 1615, 1215 and plug-in series

The tables show the series 1620

- Suitable for hydraulic and other oils on mineral oil basis
- Same fittings on both sides
- Fittings made of free cutting steel 1.0718

- Accuracy:  $\pm 0,5\%$  F.S.,  $\pm 1$  digit
- Wandlungsrate: 5/s
- 4-digit, 7-segment LCD display, 11 mm height, additional bargraph with 10 segments scale
- Proof pressure, 2.0x, 1000 bar max.
- Units: MPa, PSI and bar
- Pressure peak: min.- and max.-values
- Protection type: IP 65 acc. to EN 60529 / IEC 529
- Housing: stainless steel
- 2 x 1,5 V battery type AA, 4000 h
- Weight: approx. 0,4 kg

Digital Pressure gauge are the best solution to carry out a local network independent pressure measurement.

Accuracy, reliability and mechanical capacity make the digital pressure gauge perfect for carrying out different pressure measurements.

Axial turning of the case for better reading. Simple operation is carried out with a 3 button panel whereby pressure and pressure peaks can also be measured as well as min. and max. values.

# Accumulator charging and testing devices

Easy-to-use gas charging valves with leak proof integrity are required for charging, discharging and pressure testing of hydraulic accumulators. HYDROTECHNIK fulfills these requirements with its gas charging valves.

The quality of a gas charging valve is essential for the long term use in plants with high safety regulations. The valves are easy to use with a safe and reliable connection.

## The essential advantages:

- Very good leak proof integrity, leakage  $<2 \times 10^{-5}$  mbar l s<sup>-1</sup> within allowed operating temperatures of -20°C to +135°C
- The application and construction is common with the MINIMESS®-coupling, which has been proven over many, many times
- Automatic opening of the gas charging valve when connecting a hose assembly
- Superior and safer manual connection without additional tools
- For different accumulator designs, suitable adapters are available
- Military authorised

## Gas charging valves can be applied where hydraulic accumulators are used, for example in:

### Mobile hydraulics

- Pressure energy source for power brake and steering boosters
- Spring element in the construction of vehicles and in stationary plants

### Permanent hydraulic plant

- Maintaining the pressure in fastening devices, presses and pressing devices
- Additional sources of energy in stationary plant

# MINIMESS®-gas charging valve 1615

Maximum working pressure 63 MPa

## Compatible with the following media

Inert gases, nitrogen and compressed air. Resistant against antifreeze, oil, anti corrosion oil, grease and fuel.

Thread G		Type of sealing A	Torque in Nm	Technical data				Operating temperature range	Coupling material	Part-number with FKM sealings
				p max	H in mm	i in mm	SW in mm

## Material

Body: 1.4104 (C4)  
Pressure spring: 1.4310  
Screw cap: brass (blackened)

## Sealing

Internal primary and secondary sealing as well as integral seat seal and anti vibration O-ring (to prevent loosening of the metal cap) made of Viton.

**Attention: Before using oxygen, please ensure you rinse and clean the gas charging valve.**

## Adapter incorporating gas charging valve 1615 made of stainless steel

\*) Application of suitable sealing materials on request.

## Explanations:

- 1 = good, absolute resistance without modifications
- 2 = limited, resistance depends on using time and operating conditions
- 3 = not recommended - material is affected and the mechanical characteristics are decreased
- 4 = slight diffusion when using gases; can only be used as a test- and filling hose. For permanent use, we recommend our measuring tubes made of stainless steel
- 5 = the transparent material can change the colour
- 6 = slight swelling, but no modifications of the mechanical characteristics

If your medium of application is not mentioned, please get in contact with us.
